Ayer's Hair Vigor,

For restoring Gray Hair to its Natural Vitality and Color.

A dressing which is at once agreeable, healthy, and effectual for preserving the hair. *Faded or gray hair is soon restored to its original color with the glossy freshness of youth.* Thin hair is thickened, falling hair checked, and baldness often, though not always, cured by its use. Nothing can restore the hair where the follicles are destroyed, or the glands atrophied and decayed. But such as remain can be saved for usefulness by this application. Instead of fouling the hair with a pasty sediment, it will keep it clean and vigorous. Its occasional use will prevent the hair from turning gray or falling off, and consequently prevent baldness. Free from those deleterious substances which make some preparations dangerous and injurious to the hair, the Vigor can only benefit but not harm it. If wanted merely for a

HAIR DRESSING,

nothing else can be found so desirable. Containing neither oil nor dye, it does not soil white cambric, and yet lasts long on the hair, giving it a rich glossy lustre and a grateful perfume.

Ayer's Cherry Pectoral,

For Diseases of the Throat and Lungs, such as Coughs, Colds, Whooping Cough, Bronchitis, Asthma, and Consumption.

Probably never before in the whole history of Medicine, has anything been so widely and so deeply in the confidence of mankind as this preparation is now for pulmonary complaints. Through a long series of years, and among most of the races of men, it has risen higher and higher in their estimation, as it has become better known. Its unfailing power and power to cure the various affections of the lungs and throat, have made it known as a sovereign protector against them. While subjected to the severest forms of disease, in climates and at seasons when the tide of sickness and death is most rife, it has been found a safe and reliable remedy for incipient consumption, and the chronic affections of the throat and lungs. As a protection against sudden attacks, it should be kept on hand in every family, and administered at the first approach of danger. It should be provided with the utmost care for children, though settled consumption is beyond its power to cure, still great relief follows its use, and it seems to mitigate the severity of the pulmonary symptoms in the last stage of the disease, and where other remedies have entirely failed, confirmed consumptives have found relief in, or benefiting themselves permanently, will be possible by taking the *AYER CHERRY PECTORAL* daily.

Have Confidence, in what has given such decided relief in so many cases of Pulmonary Complaints, and which has proved so effectual in curing so many of the most alarming and fatal diseases which afflict humanity. If they should not at once relieve, they will prove beneficial to the patient, and warrant the use of the medicine which can be had.

Ayer's Cherry Pectoral is generally required.

Ayer's Ague Cure, for Fever and Ague and all other Malarious Fevers, is an effectual remedy against the Fever and Ague, Chills and Fever, Intermittent Fever, Bilious Fever, and other Malarious Fevers, which are so prevalent in many localities, and so difficult to cure by other medicines. Not one bottle in a hundred has been found necessary in the worst cases, when the patient has followed the directions and taken the medicine according to the directions. Some cases have required a second bottle, but not more than one bottle has been required in the worst cases of Ague. It is a vegetable preparation, and may be taken by the most delicate child with perfect safety. It contains no Quinine or other poisonous drug, and may be taken by those who do not require the effect of medicine on the system, with the assurance that it will not produce Quinine Deafness, or any other injurious effect. Its effects are those of a tonic, invigorating the system and expelling the Malaria which causes the disease. Its cures are permanent, and the patient is left as healthy and vigorous as before the attack. Its tonic effect is such that it may be taken by those who are recovering from sickness, without injury, and it will not cause a relapse, like other bitter tonics, but will leave the patient healthy. Its action on the system is such that it may be taken by those who are in good health, to prevent the attack of Fever and Ague, or other Malarious Fevers, in those localities where they are liable to be attacked. Its value in those localities where these fevers prevail, has been fully tested by many persons who have lived there for years, and who have found it a protection against the disease, when all other means have failed. Many persons who have been in the habit of taking large quantities of Quinine to prevent the Fever and Ague, have found it sufficient to take a few doses of Ayer's Ague Cure, and have not been troubled with the disease, although they were in localities where they had before been compelled to leave on account of the Fever and Ague. Many such cases have been reported to us, but we do not publish them, because we do not wish to use the name of our medicine in connection with any statement which is not well known to be strictly true. The Ague Cure is a concentrated vegetable preparation, and we have every reason to believe that it will prove as efficacious in the cure of the Fever and Ague and other Malarious Fevers, as any other medicine we can produce. We do not claim that it will cure, or even benefit, all who may try it, but we do claim that it will cure those who are not incurable by other medicines, and that it will benefit those who are not benefited by other medicines. We do not publish certificates of its cures, because we do not wish to occupy the space in the public prints with matter which we think the public do not wish to read. We prefer to let our medicine go into the hands of those who need it, and we do not fear the result, when it is fairly tried. We do not ask our friends to recommend it to those who are not their friends, but we do ask those who have been benefited by our medicines, to let their neighbors who are sick and suffering know the fact, that they may have the benefit of our skill and experience. We do not publish the names of our agents, because we do not wish to deprive our neighbors of the benefit of our medicines, by exhausting our supply in the hands of those who are not their neighbors and friends. We do not publish our Almanac, because we do not wish to occupy the time of our agents with the sale of books, when they have so much else to attend to. We do not publish our Ague Cure, because we do not wish to deprive our agents of the time which it would require to explain the nature and effects of our medicine, when they have so many others to attend to. We do not publish our Cathartic Pills, because we do not wish our agents to be obliged to carry a load of pills, when they have so many other medicines to carry. We do not publish our Sarsaparilla, because we do not wish our agents to be obliged to carry a load of Sarsaparilla, when they have so many other medicines to carry. We do not publish our Cherry Pectoral, because we do not wish our agents to be obliged to carry a load of Cherry Pectoral, when they have so many other medicines to carry. We do not publish our Hair Vigor, because we do not wish our agents to be obliged to carry a load of Hair Vigor, when they have so many other medicines to carry. We do not publish our Pills, because we do not wish our agents to be obliged to carry a load of Pills, when they have so many other medicines to carry. We do not publish our Liniment, because we do not wish our agents to be obliged to carry a load of Liniment, when they have so many other medicines to carry. We do not publish our Pectoral Drops, because we do not wish our agents to be obliged to carry a load of Pectoral Drops, when they have so many other medicines to carry. We do not publish our Tooth Ache Drops, because we do not wish our agents to be obliged to carry a load of Tooth Ache Drops, when they have so many other medicines to carry. We do not publish our Worm Lozenges, because we do not wish our agents to be obliged to carry a load of Worm Lozenges, when they have so many other medicines to carry. We do not publish our Ointment, because we do not wish our agents to be obliged to carry a load of Ointment, when they have so many other medicines to carry. We do not publish our Rheumatic Pills, because we do not wish our agents to be obliged to carry a load of Rheumatic Pills, when they have so many other medicines to carry. We do not publish our Fever and Ague Pills, because we do not wish our agents to be obliged to carry a load of Fever and Ague Pills, when they have so many other medicines to carry. We do not publish our Dyspepsia Pills, because we do not wish our agents to be obliged to carry a load of Dyspepsia Pills, when they have so many other medicines to carry. We do not publish our Purging Pills, because we do not wish our agents to be obliged to carry a load of Purging Pills, when they have so many other medicines to carry. We do not publish our Liver Pills, because we do not wish our agents to be obliged to carry a load of Liver Pills, when they have so many other medicines to carry. We do not publish our Female Pills, because we do not wish our agents to be obliged to carry a load of Female
