Candle to Burn Nearly Five Years For Joe Petrosino.

TERROR OF ITALIAN CRIMINALS

Nine Foot High Candle Adorned With Gold Will Remain Lighted in Memory of New York Detective Slain in Palermo, Sicily.

A candle so well be lighted to burn four years and seven months in memory of Joseph Petrosini, the detective on the New York police force who was assassinated in Palermo, Sicily. It was constructed with mathematical certainty by a New York firm and was to have been placed in the precinctical on Mott street, New York, to keep alive the light of remembrance, but because of its dimensions and expensive character the determination was reached that it await the wishes of Mrs. Petrosino, who probably will have it sent to her husband's birthplace in Italy and there enshrined to burn until the last particle is consumed.

There was another reason apart from those advanced to explain why the candle was not placed in the precinctal. Anonymous threats were made to destroy the church on the day of the funeral of Petrosino, and it is understood that it was thought the burning of the memorial candle in the church would be a constant reminder of Petrosino's martyrdom to the desperadoes who plotted his death. To avoid this the candle was quietly taken back to the makers, in whose home Petrosino had been reared and where he was looked upon as a beloved member of the family.

The fashioners of the candle are experts in the making of candles used in the ceremonies of the Roman Catholic church. About nine months ago Petrosino called at their shop while Father Monteleone of Mount Carmel was there and jokingly asked what kind of a candle would be made to burn for him. The elder member of the firm replied that the day was far off when that service would be required, but when Petrosino insisted replied jokingly:

"When the time does come, Joe, a candle to burn in your memory will be made that never has been equaled in Rome or in France or in the United States. It will be the most perfect ever designed."

Immediately after the news of the assassination was received the promise was recalled, and the candle firm set its most skillful men at work. They kept at the task night and day, for the candle had to be made by hand and its ingredients so blended and its long wick so prepared that it would burn longer than any candle ever manufactured.

The principal material used was pure Austrian beeswax kneaded and tempered and mixed with a secret ingredient to retard combustion. The wick, of a special Egyptian cotton, was treated with a composition to keep it from feeding too fast with the waxy fuel. The candle was ready on the night of the day the slain detective's body arrived in New York.

The candle is nine feet high and has a circumference of three feet six inches. It weighs 175 pounds. From within one foot of the tip to one foot of the base it is embossed with fourteen carat gold, laid on in octuple leaf. The enterprise, all pure gold, shows lilies of the valley and a representation in miniature of the holy college. The laying on of the gold and the fabrication of the design were the work of two men, who kept at their tasks when time began to press, thirty-six hours, with only a brief intermission for eating and sleeping. The cost of the candle was $450.

Precise calculation as to the time the candle will burn was not figured out to the hour, but the makers believe they are within ten hours when they say that it will burn steadily four years and seven months.

NO TOOTHACHE AFTER 10 A. M.

Request For Leave Must Be Filed Early on Day of Game.

Owing to the opening of the baseball season in Norfolk, Va., Postmaster Carney caused the following notice to be conspicuously posted in the office:

"All requests for leave of absence on account of toothache, severe colds and minor physical ailments and on account of funerals, picnics, church socials and the like must be handed to the superintendent of your division before 10 a. m. on the morning of the game."

Object of Hygienic School Car's Trip.

Professor Snow of the Stanford university recently left San Francisco on a campaign of sanitary education Professor Snow is traveling in a private car equipped by the state, and he expects to spend several months in the rural districts. The car is filled with models showing farmers how to care for their homes, barns, food, water drainage and general hygiene. This is the first time in history such work has been undertaken so thoroughly.

While Wheat Soars.

I must not throw upon the floor
The crust I do not eat,
For many a hungry millionaire
Would think it quite a treat.

Ehen! Our tears fall thick and fast;
They dim our eyes for old time's sake;
We gone we know, except in dreams,
Our lifelong mother, good as bread.

Of a penny, two a penny,
Hot cross buns.
Pay one cent a dollar straight,
Not hot cross buns.
—Ella A. Fielding in New York World.

FIGHTER OF GRAFTERS.

Incidents in the Career of Governor R. L. Lilley of Connecticut.

When Governor George Lounsen Lilley of Connecticut was fourteen his parents moved into Oxford, Mass., leaving him behind to run his uncle's farm. The Lilleys went west to Medford, and there the boy decided must from a cart for the farmer who occasionally sent him to Boston to buy supplies. On one of these trips the lad, who was not eighteen, learned that there was a shortage of potatoes in New England and that there was an abundance of them in Nova Scotia. He induced a Boston merchant whom he knew to lend him $2,000, with which he went to Nova Scotia, chartered a schooner and loaded a cargo of potatoes to Boston, where he sold them at a handsome profit.

His entry into politics in 1900 was spectacular. He entered a town meeting at Waterbury, Conn., which was packed with adherents of a controlling ring of grafters and denounced its extravagance. A road repairing contract was about to be awarded for $27,000, and he agreed to do the work and live up to all its specifications for $25,000. He was not only heeded down, but was threatened with personal violence.

That experience determined his future course in life. He announced himself as a Republican candidate for the legislature and as a foe to all grafters, large or small. He was overwhelmingly elected and made good from the day of his election. He served a second term and was then sent to congress, where before he was hardly warm in his chair he defeated an attempt to extend an electric light company's franchise in Hawaii upon terms that were oppressive to consumers. It was a hard fight, for he was up against seasoned congressmen, but he won out.

BARS TO SIGNALING MARS.

Messages Mechanically Impracticable, Thinks Professor Mitchell.

Professor William H. Pickering of Harvard university will have to overcome some very real difficulties before he can hold conversations with the inhabitants of Mars. So Professor S. Alfred Mitchell of Columbia university said the other afternoon. The most puzzling of these difficulties, in Professor Mitchell's opinion, will be the mere construction of the gigantic mirrors by which means Professor Pickering proposes to throw a beam of concentrated light in the direction of Mars in such a way that signals can be transmitted.

The mirrors, Dr. Mitchell says, would have to be about a thousand yards in length, and their cost would be stupendous. It is extremely doubtful if the whole scheme is not mechanically impracticable, according to Dr. Mitchell, because of the very delicate machinery that would have to be made to keep the mirrors in adjustment.

After the mirrors have been constructed Dr. Pickering will have to worry about the code by means of which he will talk with the Martians. "It is very unlikely," said Dr. Mitchell, "that the people on Mars are conversant with the Morse code, and it will take at least five years for Dr. Pickering to teach it to them, if he is able to do it at all. Life on Mars is supposed to be much older than on the earth, and there is no reason why we should not believe the Martians have been signaling to us for years, while we in our ignorance have been unable to decipher the messages or even detect the signals."

TO ABOLISH DARKNESS.

Hoosier Inventor Has a Device to Make It Always Daytime.

After ten years of work David R. Neely of Petersburg, Ind., has perfected an arrangement by which he believes that daylight can be made to continue through the twenty-four hours. He has applied for patents.

He has made a system of lenses and reflectors of great size, which he proposes to put on towers a thousand feet high a hundred miles apart, and with these he expects to carry daylight back many hours after night has fallen.

In order to keep the lenses and reflectors at focus a clockwork apparatus is to be provided and with the lenses so focused he expects to give daylight all the time.

Women's Cake Baking Challenge.

Mrs. B. L. Wilson of Nashville, Tenn., is out with a challenge to any woman in the United States for a cake baking contest. The cakes made by Mrs. Wilson have carried hermane over several southern states. She is a dabbledame, and her cakes are served at almost every society gathering in Nashville. She says she has no secret for making cakes; that success in baking depends simply on a knack for the work. She first found her skill in baking to please her husband and first won general praise for her baking by 200 individual cakes which she served to as many guests at a Dutch luncheon.

New Breed of Night Riders.

Landowners in Pike and Daviess counties, in Indiana, are being terrorized by a secret organization whose purpose is to fix land rentals, says a Petersburg dispatch. Barns are being burned and other depredations committed. The organization, supposedly composed of renters, has notified all landowners that they must let their land for the season for one-third of the crops, thus giving the renters two-thirds instead of two-fifths, as has been the rule for years. Albert Cupbart's barn was burned the other night, and the farm of Albert Hensel was visited, and three sulky plows were broken to pieces with axes.

Anti-acid For Calves.

When calves crave for wood or other unnatural substances it is an indication of an excessive acid condition of the digestive organs. They need an antacid, the same as cows eating bones to neutralize this acid condition. Give them a teaspoonful of bicarbonate of soda in milk twice daily.

Mixed Ration More Profitable.

For wintering cattle it is more profitable to feed a mixed forage ration than to feed any single kind of forage. —Nebraska Experiment Station.

STOCK AND DAIRY.

A close, poorly ventilated stable may be very cold. It takes plenty of pure air to keep cattle warm.

Selecting Range Cows.

In selecting range cows for dairy work the Colorado experiment station reports that grade Shorthorns have usually been found the most satisfactory. The cow should be sired for four dairy points—a good udder, prominent hip bones, a sharp hump at the top of the shoulder and large stomach capacity.

White Specks in Butter.

White specks in butter are sometimes nothing more than the particles of milk curd caused from lack of care in skimming. Sometimes they are small specks of dried cream due to dry cream having been scraped from the sides of the pan and being too dry to thoroughly soften and mix with the rest.

Selecting Breeding Stock.

In building up a herd of pure bred animals on the farm as much attention should be given to the foundation of that herd as would be given to the foundation of the house or the barn on the farm. The selection of the breeding stock is of prime importance. If you could secure the help of a successful breeder in making the first purchase it would be advantageous. Men of experience are quick to observe certain important points the beginner would overlook. Without sound judgment, good care and management you cannot expect to succeed in increasing the fertility of your land, building up a home or establishing a herd of pure breds.

RUBBER STAMPS AT ONE-HALF PRICE

Are cheap enough, but they will not answer a 10-to-daily business PRINTING. A business man is judged as much by the quality of stationery he uses as by the general appearance of his store. We can do the "quality" kind of printing for you at the office—the kind that simulates business pride, and helps your credit with the outside business world.

$2,000 ADVERTISING CONTEST

The above amount of prizes will be given away absolutely Free to the successful contestants in Hornell and vicinity

In submitting this, our first Great Contest, to the people of Hornell and vicinity we feel that from an advertising standpoint it will go down in history as a great trade event in piano circles, and the publicity and benefit derived will be by far the most effective and permanent of any in all our 53 years of established business.

FREE! One $400 Kurtzman Piano with Stool and Scarf.....

Piano	$400
One credit check, good on any new piano	$150
Two old violins (valued at $50 each)	$100
Two mandolins (Valued at $25 each)	$ 50
FIVE $100 credit checks, good on any new piano	$500
Four $75 credit checks, good on any new piano	$300
Ten $50 credit checks, good on any new piano	$500
Grand Total	$2,000

Can You Solve it? The Celebrated 12 Puzzle?

Remember, it costs you nothing to compete for these prizes—only a little time and energy and you may secure the beautiful piano absolutely free.

	6	
	3	
	3	

Take any of the numbers 1, 2, 3, 4, 5, 6, 7, and place in the nine squares in this or a separate sheet of paper, so that when it is read from right to left, or from top to bottom, it will make 12. The same number cannot be used more than twice.

Remember, neatness and artistic ideas count as well as correctness. Contest closes Saturday, May 8th, 1909.

Winners will be notified by mail and the awarding of prizes will be left to disinterested parties.

No Employee Will be Allowed to Compete

Remember, the success of this house has been due entirely to its fair and honest dealings, and our best customers come from thousands of people in all parts of the country who have purchased pianos from us. Since starting in the business 50 years ago we have always handled none but throughly reliable goods, and our prices have always been as low as is consistent with good material and fine workmanship. Our prices are well established, and every piano is marked in plain figures, and our stock consists of such well-known makes as Kurtzman, Hardman, Gabler, Haddorff, Hobart M. Cable, Kingsbury and others. Also Piano Players and Inner Player Pianos.

Send all answers to the above puzzle with your name and address. to

Death of An Eminent Jurist

Supreme Court Justice John M. Davy died at Atlantic City, Wednesday.

Justice Davy had held many offices of honor and trust, in the state and each with signal ability and fidelity. He was district attorney of Monroe County, he also represented his district in Congress, and 1888 was elected to the positions of Supreme Court which position he held until barred by age limit. He was sincerely conscientious in the discharge of the duties of his office, the equity side of his make up prevailing.

Judge Davy will be mourned by all who knew him as an upright judge.

We often wonder how any person can be persuaded into taking anything but Foley's Honey and Tar for coughs, colds and lung trouble. Do not be fooled into accepting "own make" or other substitutes. The genuine contains no harmful drugs and is in a yellow package.

Noted Radium Chemist Honored for Heroism

Big Tumor Killed and Patient's Life Saved.

ONLY SCAR TISSUE REMAINS.

Victim of Malignant Growth Treated in a New York Hospital Had Radium Impregnated Gelatin Injected into the Mass—Improvement Was Rapid.

What physicians pronounce one of the most remarkable cures through the agency of radium in the history of medical science was recently confirmed by the examination of a patient who was expected to die six months ago, when he went to Flower hospital in New York city with a malignant tumor the size of a child's head in his abdomen.

The large mass which threatened his life has disappeared, and the small remaining knot in its place has lost its character as a tumor and is simply scar tissue which has not been removed by the process of absorption.

Drs. William H. Dieffenbach and William Tod Helmuth, who have had the case in charge, claim for Flower hospital the discovery of the method employed, which was the injection of gelatin impregnated with radium into the tumor itself after the seat of the trouble had been reached by opening the abdominal cavity. The practice is the only other similar case on record, one performed in Europe some days ago, was to inclose the radium in a glass tube, which was sewed up in the tumor.

When the patient, who is a prominent resident of Westchester county, N. Y., was taken to the hospital Dr. Dieffenbach called in Dr. Helmuth with an idea of performing an operation for the removal of the tumor. After a thorough examination Dr. Helmuth found the tumor to be so large and its roots to have invaded so much of the abdominal tissue that he refused to operate.

A council was held, and it was decided to treat the patient with the X ray, for the purpose of preventing the spread or growth of the tumor. By this method the physicians succeeded in checking the advance of the tumor, but after three months of the treatment the skin of the patient became so irritated that the application of the X rays had to be discontinued.

Another examination proved that any operation for the removal of the mass would prove futile, and as a heroic attempt to save the life of the patient Dr. Dieffenbach proposed that the tumor be exposed and that radio-active gelatin be injected into the diseased parts.

The patient was placed under the influence of an anaesthetic, and the gelatin, which had been impregnated with $100 worth of radium, was injected in three places in the tumor. The incisions were drawn together with a purse string suture, and the abdomen was closed.

When the tumor was disclosed the surgeons pronounced it a round cell sarcoma, a most malignant variety of tumor, but cut off a small piece of the mass for analysis. A later examination of this portion by Drs. Hertzmann and Kellogg, eminent pathologists, confirmed the opinion of the operators.

The reaction from the operation was unusually severe, and at times it was feared the patient would not rally, but after a few days an increase of strength was noted, and at the end of five weeks the patient was so much improved in general health and the tumor was so greatly reduced in size that he was permitted to go to his home.

While greatly elated over the results of their efforts, the physicians did not allow their enthusiasm to overcome them, and it was only after a thorough examination of the patient by Dr. Helmuth a few days ago that they allowed a report on the case to be made public.

This last examination revealed an apparently healthy condition in the affected territory. Only a small lump remains in the place of the tumor, and this, the physicians say, retains none of the character of a tumor, but is simply a nodule of scar tissue such as remains after the healing of any moderately sized wound.

The efficiency of the treatment by the radio-active gelatin lies in the artificial irritation which it induces in the tumor, says Dr. Dieffenbach. Contraction of the tumor and a change in its character result. The physicians were moved to their decision to try the radium treatment by their observations of the beneficial results that have attended the treatment of superficial skin ulcers at the hospital by the application of radium.

The method employed in this case is declared to be superior to that in Europe, in which the radium was inclosed in a glass tube. In the latter case $5,000 worth of radium is reported to have been used, while the cost of the material used in the case at Flower hospital was one-fiftieth as much. It is thought also that in this case the activity of the radium is much increased.—New York Herald.

France to Present Gold Medal to San Francisco.

STRICKEN CITY THAT REVIVED.

French Ambassador to Deliver Latest Medal in Series Marking His Country's Friendship For United States. Will Commemorate Sister Republic's Grief and Appreciation of Courage.

M. Jusserand, the French ambassador to the United States, has written to Secretary of State Knox a letter telling of a gold medal which France wishes to present to the municipality of San Francisco to commemorate France's grief over the earthquake and fire and her appreciation of the heroism of the resurrection of the city following the disaster.

The ambassador tells of receiving from the United States government a medal commemorating the old Franco-American alliance just at the time the fire was destroying San Francisco. At that time the ambassador expressed the hope that one of the next medals to be struck and added to the series exchanged between the two countries would be on account of the San Francisco earthquake. The ambassador says:

"In the words which I spoke thus spontaneously and under the influence of the emotion caused by that event turned out to agree so exactly with the sentiment of my country that the government of the republic at once appropriated them as its own. It consequently decided to justify them while at the same time the inhabitants of the devastated region were on their part setting about to restore their city to its original beauty with the very energy and success which it had been so easy to predict.

"In conformity, therefore, with the wish which I took the liberty to express a medal is to be added to the series of those which have marked from time to time ever since the earliest days of American Independence the persistence of the sympathies which arose at the very beginning between our two countries—from the medals which commemorated the epoch of the alliance and of freedom down to the one which a popular French subscription enabled to be struck on the tragic death of Lincoln and to the one finally which the American republic offered to my country.

"This medal was ordered by the French government of Louis Bottee, winner of the ancient prize of Rome and one of our best known medal designers. On one side is allegorically represented the city of San Francisco laying aside its shroud and issuing forth from the ruins, while on the other is France presenting a branch of laurel to America. The inscription calls to mind that the medal is offered to the American people and the city of San Francisco as a token of sympathy and admiration by the French republic.

"A single specimen in gold has been struck, and I have received orders from my government to go and deliver it in person to the authorities of San Francisco. I therefore appeal to your excellency's kind offices in informing the said authorities of the instructions which I have received. It is my intention, if suitable to them, to start about the middle of next month and to deliver the souvenir to them between the 20th and 25th of May."

TEMPLE IN JERUSALEM.

Masonic Structure to Be Modeled After One Erected by Solomon.

With the idea of ultimately establishing in Jerusalem, the birthplace of Freemasonry, a Masonic temple, a petition is being circulated in Boston for the incorporation by the legislature of a company to further the project.

As yet details for the purchase of the temple have not been completed, the present plan being to have the proposed corporation attend to such matters.

The promoters of the plan urge that it is most fitting that Masonry should be represented in Jerusalem by a temple modeled after that erected by King Solomon, the first grand master of the craft.

Shiloh Church to Be Rebuilt.

An effort is being made to build a suitable memorial church on the site of the original Shiloh church, on Shiloh battlefield, now one of the most attractive of military parks, says a dispatch from Adamsville, Tenn. It was on this very spot the bloody battle of Shiloh was begun on the morning of April 6, 1862. It is the purpose to build a memorial church to cost not less than $10,000. The names of all contributors will be recorded in a permanent register and kept on exhibition in the church, which will be open to all visitors and tourists.

The National Opening.

The Black Hole of Calcutta
May have been a thing immense,
But it isn't half as popular
As the knothole in the fence.

Eczema's Most Spontaneous Effects.

Says Novelist of Good Port.

George Meredith, the novelist, paid a characteristic tribute to the late Algernon Charles Swinburne, the English poet and essayist, whose funeral took place recently on the Isle of Wight.

"Then," says Meredith, "the earth took his dear dead body and covered over our singer of all her English children."

As far as our language would admit to him he was an improvisatore. He had been native to him he would have borne the renown of a poet fired on the instant to deliver himself orally."

Mr. Meredith tells the following story—a sunshine story—of the poet whom "the sophistic literature described as 'sensuality' are the most conspicuous of his dealing with things sensuous." It happened, he says, that Swinburne was expected one day on a visit to me, and, he being rather late, I went along the road to meet him. At last he appeared, waving the white sheets of what seemed to be a pamphlet. He greeted me with a triumphant shout and a stanza new to my ears. It was Fitzgerald's 'Omar Khayyam,' and we lay on a heathery knoll beside my cottage reading a stanza alternately, indifferent to the dining bell until a prolonged summons reminded us of our appetite.

"After the meal we took to the paper covered treasure again. Suddenly Swinburne ran upstairs, and I had my anticipations. He returned with a feather pen, a blue folio sheet and a dwarf bottle of red ink. In an hour he had finished thirteen stanzas of his 'Laus Veneris,' and rarely can one poet have paid so high a compliment to another as Fitzgerald received then.

"Those who followed this great poet to his grave," concludes Mr. Meredith, "may take it to heart that the name of Swinburne is one to shine starlike in English literature, a peer among our noblest."

Marking Flodden Battlefield.

Scotland and England have agreed to forget all old unkindness and erect a monument on Flodden field in commemoration of the courage of their ancestors of 1513. Both sides are right, for the Scotch lost the battle quite as much by King James' high strung chivalry preventing him from using his strategic advantages as by the superiority of the English archery. Flodden was among the last of the great battles in which firearms counted for little or nothing.

Hair Health

SCALP AND HAIR TROUBLES GENERALLY CAUSED BY CARELESSNESS.

Dandruff is a contagious disease caused by a microbe which also produces baldness. Never use a comb or brush belonging to someone else. No matter how cleanly the owner may be these articles may be infected with microbes, which will infect your hair. It is easier to catch hair diseases than it is to get rid of them and a single stroke of an infected comb or brush often produces the cause of baldness. Never try on anybody else's hat for the reason that many a husband's a nesting place for microbes.

If you happen to be troubled with dandruff, itching scalp, falling hair or baldness, we have a remedy which we positively know will cure these troubles, and we are so sure of this that we offer it to you with the understanding that it will cost you nothing for the trial if it does not produce the results we claim. This remedy is called Rexall "93" Hair Tonic. It is the most scientific remedy for all scalp and hair troubles, and we know of nothing else that equals it for effectiveness. We know this because of the results it has produced in hundreds of cases.

Rexall "93" Hair Tonic will positively banish dandruff permanently, restore natural color when its loss has been brought about by disease, and make the hair naturally silky, soft and glossy. It does this because it stimulates the hair follicles, removes dandruff, destroys the germ matter, and brings about a free, healthy circulation of blood which nourishes the hair roots, causing them to tighten and grow new hair. We want every body in Andover who has any trouble with hair or scalp to know that Rexall "93" Hair Tonic is the best hair tonic and restorative in existence, and no one

BULL TO TROT IN RACE.

Trainers Say He Can Do a Mile in 2:30 and Issue Challenge.

Trotting between fast horses and a full grown four-year-old Durham bull will be seen on the cards for western Pennsylvania tracks this year, says a dispatch from Waynesburg, Pa.

Dr. Joseph D. Chaney and John H. Ross have for the last three years been training the bull, and they have issued a challenge to trot the bull against any 2:30 horse in the Waynesburg end of the state for a large stake. They assert that the bull has frequently trotted a half mile to sulky in 1:12 and that he can do the mile in less than 2:30.

The bull was first noticed trotting by Dr. Chaney in Maryland when it was one year old, and the doctor bought it.

Mail Boxes on Trolleys.

The trolley car has been put to many uses in addition to that of carrying passengers, but it has remained for Grand Rapids, Mich., to find a new use for these vehicles, and this is the collection of mail. Mail boxes are affixed to the cars, and whenever a person wishes to have a letter reach the main postoffice in a hurry all that is necessary for him to do is to wait on a street corner until a trolley car happens to stop at that place. The letter deposited in the box is sent direct to the trolley terminal, where carriers are in waiting to convey the mail thus collected direct to the main postoffice.

Turkish Bath For Horses.

As if blankets for poodle dogs were not enough, along comes Dr. Mark L. Frey of Huntington, N. Y., a veterinarian who has a horse and dog hospital, with plans for a Turkish bath for horses. And he really means it too, his plans being completed for building the necessary addition to his animal hospital. Dr. Frey thinks that Turkish baths for horses will make them more healthful.
