ASK THE SCIENTIST

If you have a question to ask the scientists, mail it to the New York Press Association, The Castle, Syracuse, 10, New York. The Science Board of the Radio Workshop at Syracuse University will answer each week in the Andover News those questions considered most interesting and timely.

Questioon 1. If outer space is a vacuum, why is it possible for radio waves to pass through it and so contact other planets, as has been suggested? Will radio waves pass through a vacuum?

ANSWER. Radio waves and light waves are similar in nature, the only difference being in wave length. Light waves are of extremely short wave length while radio waves are of a very long length. We know that light can pass through a vacuum because we can see the sun, and so we can conclude from the nature of radio waves that they also can pass through a vacuum. —Dr. William B. Fredrickson, physicist.

Question 2. How are seedless oranges produced, since they have no seeds.

ANSWER. We think of plants as growing from seeds, and oranges normally have seeds. Orange trees, however, may be grown from twigs cut from other trees.

If in a normal group of living things a freak occurs, scientists will call it a sport. If that sport produces its kind, it is what is known as a mutation, and would start some new form of plant or animal life. It is in such a maner that evolution gets under way.

An orange tree may have a branch which is in the nature of a sport in that it produces oranges without seeds. Twigs from this branch may be used to produce new trees which will produce oranges without seeds, and so on and so on. Orange groves have been produced in this way.—Dr. Ernest Reed, geneticist.

Question 3. Is the saying "We are born with what we die of" true?

ANSWER. All investigation in the field of genetics on special hereditary characteristics indicates persons are born with potential hereditary materials which develop into form, structure, and physiology of organism. It is the breakdown of these parts which results in natural death. (Accidental death has no relation, of course.)

These hereditary characteristics may be modified by medicine and length of life prolonged by medicine, but when the natural cause of the death of a person is put on paper, it may be considered that heredity furnished cause for that death. Dr. Ernest Reed, geneticist.

Question 4. Is star dust something real or a poetic expression?

ANSWER. It is both, but we'll leave the latter to the poets. Meteorites which flash in the sky as shooting stars leave a small residue of iron and other rock substances which float to the earth as ultra-fine dust. This dust has not been certainly identified, but it is undoubtedly something like iron rust in color though some of it may be gray.

It comes to the earth in such small quantities that it is now unimportant as a builder or sediments, although over the period of the existence of the earth, large amounts have been added to the earth. If we consider the earth to have been built in infalling plantetesimal material—the Chamberlin Moulton hypothesis of earth origin—we are walking on star dust, the star from which it came being our sun.

In other words, when a poet says he is walking on star dust, he may be speaking the truth.—Dr. Earl Apfel, geologist.

Question 5 Are the sparrows we see in the winter the same as bathe in our garden bird baths in the summer?

ANSWER. Unless our questioner is living in a neighborhood that is extremely unfavorable to bird life, he will have a greater variety of birds enjoying his hospitality in the spring and summer than in the winter. For the most part they will be different birds.

If he lives well within a large city, he is likely to have only the and perhaps starlings during the winter, but if he makes his observations in a rural section, he will find a considerably greater variety of small birds, most of them not actually sparrows, but perching birds of similar size.

In the spring he may entertain a great many migrating species, such as the junco, white-throated sparrow, and the several thrushes which nest further north. In the summer he will find a great variety of interesting sparrows and other song birds.—Prof. Henry N. Jones.

NEW FEE SCHEDULE

Effective September 16, 1946

EXTRACTIONS	
Novocain, First Tooth	$3.00
Additional Teeth Extracted at same time	2.00
