Free Chest X-ray For Andover People Tomorrow

A chest x-ray service is being brought to Andover by the Allegany Health and Tuberculosis Association, tomorrow, Friday, May 28th. The x-rays will be taken at the Andover Recreation Club between the hours of 10-12 and 1 to 6:30. The Association is offering this service to everyone, 15 years of age and over, free. The cost of the x-rays is paid out of funds raised through the annual sale of Christmas seals. This is tangible evidence of how money sent from your town is being spent. Cash your dividend by being x-rayed. No one is required to have an x-ray but a 100 per cent response will protect everybody in the community.

A mass x-ray program is the responsibility of the community at large. It cannot be undertaken entirely by one group. Everyone must contribute to make it a success.

In 1947 in Allegany county there were 13 new cases of tuberculosis and three deaths reported. Thirteen patients were admitted to Mt. Morris during the year and 17 discharged, with 14 Allegany county patients remaining in the hospital on December 31, 1947. On the same date there were 97 known cases of tuberculosis in the county. There are two active cases in the Village of Andover and three in the township. The death rate for Allegany county in 1947 was 7.5 per 100,000. This is very low and no reason why this county should not be one of the first in the state to have no death rate from this disease. We urge the people to come for an x-ray and do their part in eradicating tuberculosis in the county.

Tuberculosis belongs to no age group. It may strike at any age. It takes the lives of more young people in the productive years from 15 to 45 than any other disease. Tuberculosis is spread from person to person and therefore must be recognized as a major public health problem. Because diseases of the chest develop slowly, only by x-ray can these be found early and medical care started.

Since we know that tuberculosis is caused by a germ which sick give to the well, we know, too, that tuberculosis can be prevented. People must understand danger that tuberculosis represents to community and what they, the people can do to overcome that danger.
