Instructors Engaged by Alfred Ag-Tech Institute

Warren L. Bouck, former English teacher in the Hornell High School has begun his duties as English instructor this week at the New York State Agricultural and Technical Institute at Alfred announces Paul B. Orvis, director.

Bouck is a graduate of Syracuse University and is a candidate for the Masters Degree from Alfred University. Before coming to Hornell in 1946, Bouck taught English and history at Galway High School. He spent nearly five years in the armed forces, teaching gunnery for two years at Fort Knox, Kentucky.

Also engaged by the Institute for the coming year is Louis Loughlin who will teach agronomy, soil technology, and forage crops.

Loughlin comes from Whitesville where he was a teacher of agriculture in the high school. Previous experience includes teaching of agriculture in Jasper, Attica and Wellsville. He is a graduate from Cornell University. He has also earned his Masters Degree in Education from the same institution.

Betty Jane Daniels, daughter of Mrs. George Daniels of Williamsville has been engaged as full time librarian at the Institute. Miss Daniels has the B.S. Ed. degree from New York State Teachers College at Geneseo from which she graduated in June.

Beet greens have more food value than the roots.

Crooked rivers get that way by following the line of least resistance. So do some men.

Good water close to pasture encourages cattle to eat more and make more milk. Cornell dairy specialists advise that cows should travel the least possible distance for water in hot weather.

The Joy of Being An Editor

Getting out a newspaper is no picnic.
If we print jokes, people say we are silly.
If we don't they say we are too serious.
If we stick close to the office all day,
We ought to be around hunting material.
If we go out and try to hustle,
We ought to be on the job in the office.
If we don't print contributions,
We don't appreciate genius;
And if we do print them, the paper is filled with junk!
If we edit the other fellow's write-up we're too critical;
If we don't, we're asleep.
If we clip things from other papers,
We are too lazy to write them ourselves.
If we don't, we are stuck on our own stuff.
Now, like as not, some guy will say
We swiped this from some newspaper.*

Better Health For Children

A Community Service Issued by Children's Hospital of Buffalo, N. Y.

If you have a youngster who is starting to school for the first time this September, he si probably anticipating school with enthusiasm, but he is also a little scared of the new situation he is facing.

School is one of the first steps away from the shelter of the home, and to the child, it is a new world that seems strange, somewhat fearful and yet inviting.

Help children going to school, for the first time, by explaining about school simply, clearly and as realistically as possible. Tell him a little of what will happen, not glossing over—or exaggerating—the things which may seem unpleasant to him. Give him a true picture of school including the fun of learning and playing at school, but tell him, too, of it's limitations and discipline, and how he must consider the other children.

Often, it helps to stage a little play about school with the mother taking the part of the teacher. Pre-school children love these "make-believe" games, and they do much to eliminate the strangeness of school the first few days. Encourage him to use his own initiative in handling situations that you know may arise in school.

If you are not already encouraging him to go on short, safe errands by himself, do so before he starts to school. Let him experience being responsible for himself, and if he makes mistakes be helpful and considerate and not critical and scolding. Give him support when he is uncertain about his ability to be independent of you and his home in little things, but continue to protect him whenever he needs your protection.

Go to school with your child the first day or two. Sometimes, it is necessary to go with him for as long as a week, but don't go after you know he is safe and feels satisfactorily secure without you. Help him stand on his own two feet, and don't baby him too much or other children will feel that he is a "baby" and will tend to tease him. Stay at school only as long as it seems necessary, and then leave. Leave openly, but don't make any show about going, and do not show disappointment when your child is not upset over your leaving him alone at school. It will also help if you have taught him to help in putting on his coat and cap. His teacher will expect to help him with rubbers and galoshes, but if the first-grader can help himself with coat and cap it adds to his sense of security and responsibility for himself.

School is a creative step that starts your child on the long path of making his own decisions—or growing up. Help him to face this first, strange situation as you want him to face new situations that confront him in later years—with courage and purpose and sureness.

Buy U. S. Savings Bonds.

Everyone Urged To Be X-rayed At County Fair

The X-ray booth will be set up at Angelica Fair again this year, the Allegany Health and T. B. Assn. announces. Everyone is urged to stop for an X-ray even if they had one last year.

Most people found with advanced T. B. have a slim chance for recovery. If T. B. is discovered early and proper treatment started at once, the chances of recovery are fine.

The X-ray is the best way to find out if a person has T. B. because it is a picture of the chest. It takes only a few seconds. It doesn't hurt. A deep breath—hold it—is all. The picture is then developed like a snap shot. The doctor looks to see if T. B. germs have done any harm to the chest.

The X-ray machine will be set up in the new building that is being constructed on the Fair grounds. This service is brought to the county through funds raised through the annual sale of Christmas seals.

It is sponsored by the Allegany Health and Tuberculosis Association in cooperation with the Allegany County Home Bureau.

Some people can hear a rattle in their cars quicker than one in their heads.

An ideal gift . . . for anyone even yourself
THE ANDOVER NEWS

Erie delivers the goods . . .
to provide all the comfo.
of home . . . YOUR home.
All of us take pretty much for granted the things we use in everyday life. But look at the many items around your home.
Your food, clothing, furniture, appliances, materials used in constructing the house itself—and the coal to heat it—most all of these were carried hundreds or even thousands of miles to you by the railroads.
Carrying to you and your community the things needed for good living is a big job. In fact, a job so big that it can only be handled efficiently and at low cost by mass transportation—the kind provided by the Erie and connecting railroads.
Through constant improvement of methods and equipment, and through *progressive railroading*, the Erie will continue to provide economical, dependable service to your community.
