BEHIND THE MOVIE SETS

with

Buddy Mason

Most actors welcome a Western role—but there are other thespians who are not so enthusiastic about climbing aboard a horse!

Not that they have anything against horses. They just feel that there is a place for everything—and a saddle is not the place for the seat of their trousers!

This small group of non-horse-minded individuals can take their horses or leave 'em alone. They seem to have no desire to overindulge in saddle gymnastics.

For example, the late George Arliss never yearned for a role with spurs that jingled, but the equally artistic Lionel Barrymore rode whenever he could and in recent years, when health would permit.

Humphrey Bogart got his first lesson in flying while leaving the back of a bronco on his first attempt to interest Hollywood in his acting. He departed shortly after for two or three years on the New York stage, where a man could do his acting standing up. He has been on horseback once or twice since his return to films. But it is not his most comfortable acting position. He claims that he handles a boat with greater skill and pleasure, or the operating end of a deadly weapon, or the sweeet lips of the romantics. For Bogey, horses seem to lack a spirit of cooperation.

Jimmy Cagney and Edward G. Robinson are two other he-man actors who are not overly horse-minded, although each has been hoisted into a saddle for at least one role during his Hollywood experience. Cagney did his saddle straddling in the "Oklahoma Kid" while you may have seen Robinson doing polo scenes for "The Little Giant". What you didn't see in this picture was the fall he took from his mount. What's more, steps were taken to be certain that no one ever does see Eddies' imitation of birds in flight.

George Raft, who enjoys "Getting on a horse" when the odds are right—would prefer to leave the actual riding in the more capable hands of the jockeys. Cary Grant was shown being thrown from his mount in "Night and Day", but since that time horses are noticeably absent in his pictures. Bing Crosby is another to whom horses offer much enjoyment—when someone else is in the saddle, preferably a winning jockey.

Bill Powell never has "pulled leather" for a picture—and if he has his way about things, probably never will.

The rest of Cinemaland's histrionic heros, however, either love horses or can ride them without much pain.

About half the movies in production at this writing are Westerns. Among our recent Western stars is one of the best riders we've seen in some time. Jim Bannon, the up and coming buckaroo who plays Red Ryder in the series of that name looks like part of the horse he rides. Emmett Lynn, who plays "Buckskin" has ridden from childhood and Jug Reynolds, the youngster who plays "Little Beaver" would rather ride than eat His burning ambition is to grow up and become a jockey. "If I don't grow up too much", adds Jug.

Expert and novice, half of Hollywood is riding. Even sweet singer Gordon McRae climbs aboard a pony in "The Return of the Frontiersman", to warble a bit.

Pity the poor Hollywood horses Between the fusillades of gunshots, guitars, explosions and crooning riders—they never know what to expect next.

If some of our actors are a trifle horse-shy who could blame the ponies if they should suddenly get a little man-shy?

All Settled

"Have you reached a verdict?" asked the judge.

"Not yet, your honor," replied the foreman. "We want to make this trial fair and square, and before we render a verdict we want to ask the defendant one question."

"What is it?" asked the judge.

"Does he want AC or DC current?"

Speaker: "Remember, there's nothing in the world that's impossible to accomplish."

Inevitable voice from the rear: "Ever try to push tooth paste back in the tube?"

Lonely baby chick taking a look around the electric incubator full of unhatched eggs: "Well, it looks as if I'll be an only child. Mother's blown a fuse."

Better Health For Children

A Community Service Issued by Children's Hospital of Buffalo, N. Y.

The better care you give your child's primary, or "baby", teeth the better the chances are that he will have good, strong, healthy teeth when he is grown.

The first step in providing a child with good primary teeth is proper diet for the mother even before the baby is born. Then, after the baby arrives, he should get plenty of milk, cod liver oil or its equivalent, vegetables and orange juice to assure the sound growth of these first teeth.

It is important that children's primary teeth be cleaned and checked by a dentist periodically. Most dentists recommend a check-up approximately every 6 to 8 months, because primary teeth that receive proper care will stay in place longer, and hold the jaw in the proper shape for the uncrowded development of the permanent teeth. They are also needed for proper chewing, and are necessary for good general physical development.

Parents can also aid in the development of their children's permanent teeth by limiting the amount of candy children eat to a very negligible amount. Too many sweets is one of the leading causes of tooth decay. Natural sugar as found in fruit juices, fresh and dried fruits, raw vegetables, maple syrup and honey is less detrimental than refined sugar. Children who receive these foods instead of candy when they are hungry will have better teeth—and their parents will have fewer dental bills.

A 2 per cent solution of fluorine painted on the teeth is now being widely used by dentists to further prevent decay. The teeth are painted four times in the initial treatment, and then should be repainted at approximately, 3, 7, and 9 years for best results.

Important, too, is that your child makes friends with the dentist. He won't be afraid of going to the dentist if that fear is not planted in his mind. Instead of talking about your own painful experience at the dentist's, teach him that the dentist will help him take good care of his teeth, and thus prevent tooth troubles that are painful.

In tooth care, prevention is the only sure cure, and it is up to parents to teach children daily care of their teeth and responsibility in taking care of them.

Measles, one of the most common of all childhood diseases, is not a serious disease in itself, but complications resulting from measles are dangerous. For this reason, every parent should have some knowledge of the disease, and a child should be under a doctor's care if he has measles.

Measles first appears as a bad cold, growing worse. The child's eyes become red and watery, and he develops a hard, dry cough. He will continue to feel sick, and his fever will continue to rise, for about four days. Usually, on the fourth day of the illness, the measles rash appears.

The measles rash begins as indefinite pink spots behind the ears. It spreads over the face and body and the spots get larger and darker in color. It takes from one to two days for the rash to develop fully, during which time the child will feel sick and miserable. However, once the rash is fully developed, the fever drops and the patient improves rapidly. If all goes well, the doctor will usually let a child be up and playing with other children a week after the first rash appears.

Bronchitis, pneumonia and ear abscesses are the most common complications which develop after measles. If the fever persists more than two days after the first rash appears, or if it drops, and then recurs, you should suspect complications and contact your doctor immediately. If a child has convulsions during or following measles, it may indicate a severe complication. Call your doctor at once!

If you know your children have been exposed to measles, your doctor can give them preventive serum. This is advisable for children under 4 years of age who are subject to colds and sore throats, and for all children who have any chronic disease. Measles serum is effective for only two weeks, so there is little reason to try to protect healthy, older children. The serum does not always prevent measles entirely, but it will make a case if it does not prevent it.

Ambitious

The old engineer pulled his engine up to the water tank and briefed the new fireman. The fireman got up on the tender and brought the water spout down all right, but somehow his foot caught in the chain and he stepped right into the tank. As he floundered around in the water, the engineer watched him with a jaundiced eye.

"Just fill the tank with water, sonny," he drawled. "No need to stamp the stuff down."

Public Notice

PUBLIC NOTICE, in the matter of changes in Local Service Rates for Telephone Service furnished by the Allegany Mutual Telephone Company.

Pursuant to revised schedule of Local Service Rates filed with the Public Service Commission on July 28, 1950, the following new rates become effective on October 1, 1950 or when dial service is in operation.

COMMUNITY LETTERS

From News Correspondents

Davis Hill

Mrs. Floyd Slocum, Reporter

Aug. 15—Mr. and Mrs. Burt Thayer and twin daughters of Ontario, N. Y., were week-end guests of Mr. and Mrs. Glenn Halsey.

Dolores Halsey visited her sister, Mrs. Arthur Havens and family of Wellsville from Tuesday until Friday.

Mr. and Mrs. Orson Babbitt of Wellsville were supper guests of Mr. and Mrs. John Dodge Friday.

Mr. and Mrs. Glenn Halsey and daughter Dolores and Mr. and Mrs. Burt Thayer and daughters attended a birthday party held at the home of Mr. and Mrs. Francis Brown in Andover Saturday in honor of little Miss Glenn Havens.

Mrs. Charles Halsey returned home Monday from the St. James Mercy hospital in Hornell where she recently underwent a major operation.

Voorhees Hill

Mrs. Raymond Church, Reporter

Aug. 15—Miss Rosalyn Cary of Painted Post spent the week-end with Mr. and Mrs. Abram Slocum.

Master Duane Church of Knoxville, Pa. is spending the week with his grandparents and other relatives in this area.

Mrs. Verna Jean Willis of Wellsville and Mrs. Hilda Stout and daughter Sharon of Hallsport were guests at the home of their parents, Mr. and Mrs. R. B. Church Thursday.

Mrs. Maude Hallett and son James of Addison called on the Hill Sunday.

Mr. and Mrs. Emerson Spicer of Warren, Pa., were dinner guests of Mr. and Mrs. Carroll Church Tuesday.

Independence

Mrs. Floyd Clarke, Reporter

Aug. 15—Mrs. Charles Clarke Sally and Billy returned from Keuka Lake where they have been vacationing for two weeks.

Mr. and Mrs. Earle Greene have been spending a few days at their cottage at Keuka Lake the past week.

Mr. and Mrs. Cleon Clarke and Sheila spent Saturday at Silver Lake.

The church finance committee are serving a Smorgasbord dinner at the Parish House Thursday at 6:30 p. m. Everyone is invited to come and help themselves to a good feed.

Director S. W. Clarke is in New York City this week attending a Dairymen's League directors meeting.

Mrs. Floyd Clarke has been vacationing at Keuka Lake for two weeks returning home Saturday.

Mr. and Mrs. Willis Jewett and three children of Detroit, Mich., are visiting ner parents, Mr. and Mrs. Milford Basssett.

Miss Carolyn Clarke is spending a week with Corrine Alvord at Waneta Lake.

Mr. and Mrs. Harold Barney, Sr., Mr. and Mrs. Howard Barney and two daughters, Mr Floyd Clarke and Gerald Clarke attended the potato tour in Pennsylvania last Tuesday. The tour started at the old Cobb farm at Spring Mills.

Mr. and Mrs. Lyle Densmore and daughter of Elmira were Thursday guests of Mr. and Mrs. Decatur Clarke.

Mrs. Carrie Slade of Andover spent Friday at the home of her brother, Floyd Clarke.

THE GRANGE NEWSLETTER

BY E. PAYSON SMITH

MAKYES TWINS over in Onondaga County occupy the limelight this week for having passed their 60th Grange milestone. Edwin L. and AlbertC. Makyes were born on a farm at Onondaga Hill August 15, 1868, a matter of minutes apart. They've been pretty much together for 82 years since, 60 of them spent as members of Onondaga Hill Grange No. 682. In appropriate ceremonies, Pomona Grange turned out to do them honor by presenting them with pins and certificates which had scarcely been created, so rare is the honor. There have been few Granges who could claim such length of membersip in our eighty-three year old farm fraternity, but we are certain that the Makyes boys are the first twins to attain that distinction.

Fred J. Freesone, past Master of N. Y. State Grange, who received his own 50-year Golden Sheaf Certificate two years ago, made the presentation to the Makyes twins, saying "Grange members throughout the nation will pay homage to your fidelity of service."

GRANGE EXHIBITS at State Fair this year again reach a high degree of excellence, as the 3 Pomona and 9 Subordinate Granges, according to custom, will compete for honors and cash awards.

Oneida County Pomona will have as its theme this year, "Youth Activities"; Livingston county, "Wheat and It's Products"; and Washington County, "Farm Ponds and Fire Protection."

Nine Subordinate Granges who will build displays in the Horticultural Building are Interlaken (Seneca Co.), Borodino (Onondaga), Morrisville (Madison), Castle Creek (Broome), Oakfield (Genesee), Centerville (Allegany), Mettowee (Washington), Malone (Franklin) and Gouverneur (St. Lawrence).

Charles Riley, in charge of Grange Exhibits, has announced also there will be three half-hour programs daily, Monday through Friday, in the Grange Building (first inside the main gate on right hand side), and will be varied with literary, dramatic and musical entertainment. Organ recitals and sound movies will round out each program. The ladies of the Service and Hospitality committees will be on hand to register folks and give information. All Grangers are urged to use this building as headquarters for their stay at the Fair.

Bovine Mastitis and Milking Machines

Does the kind of milking machine a farmer uses have anything to do with the extent of mastitis in his herd?

Because conflicting answers have caused a lot of confusion among dairymen, the American Veterinary Medical Association decided to get some expert opinions on the matter.

Experienced veterinarians who were questioned agreed almost unanimously that the brand of milking machine a farmer selects is much less important than the way he uses it.

Any reputable brand of machine should give satisfactory results in a properly managed mastitis control program, the veterinarians said.

The key to successful use, they emphasized, is to operate the machine strictly according to the manufacturer's instructions and to keep it in perfect working condition at all times.

Trouble begins, the AVMA report concluded, when owners tamper with the machine — in other words, when they try to be engineers instead of efficient dairymen.

The Sunday supplement to newspapers became popular in the 1880's.

Trick of Nature Reverses Effectiveness of New Drug

Hopes that vast tropical areas may be made livable for farm animals through use of a new drug are being dimmed by a trick of nature.

The drug is antrycide, developed by British scientists and heralded as a means of preventing and curing trypanosomiasis in livestock

The trick of nature is the ability of certain germs and parasites to build up resistance against drugs intended to destroy them.

Trypanosomiasis, a deadly blood disease, is caused by tiny parasites that are spread from the blood stream of one animal to another by biting insects, especially tsetse flies. It is so prevalent in certain fly-infested tropical regions that it is practically impossible to raise healthy livestock of any kind. Human beings also are affected by the disease.

Belief that antrycide would solve the problem was based on extensive research which showed that single injections of the drug protected animals against infection for a considerable time, and the drug also was effective in treating animals already down with the disease.

But when field trials were carried on in Africa to test it further, veterinarians observed that the microscopic parasites responsible for the disease were often able to fight back against antrycide so as to overcome its effects. Instead of being killed or knocked out when they came into contact with it in the animal's blood stream, many of them were found able to build up resistance quickly against it.

Hopes are still high, however, that antrycide will prove its worth in further trials, and that its use will make possible a much-needed expansion in tropical livestock production.

Answer These Questions Before Making Purchases

There is nothing like a white elephant party to betray the weakness of homemakers for acquiring seldom-used kitchen tools or utensils. Strangely enough, some of us rush to grab tools that other homemakers have banished. That's what makes white elephant parties such a success!

Why don't women think before buying the myriad gadgets now in colorful array in the shops? Try answering these questions before we make the purchases:

Do I have ample space for storing it? Does it warrant that much space? Do I really need this? Will it make my work easier? Is this tool easy to operate? Is it safe? What will the upkeep cost be? How many years of service can I expect from it? Is the initial cost really too much when spread over a period of years?

Appliances that can be used for more than one job to save foods or labor—those are not white elephants.

Meteor and Meteorite

A meteor is the flash of light (often called a "shooting star") which we see in the sky. It is caused by a small piece of iron or stone that enters the earth's atmosphere from outer space. Because it moves so fast, there is a great deal of friction, and the material is usually completely burned while many miles high. Occasionally, however, one somewhat larger than usual comes in and survives the passage through the air long enough to land on the ground. This is a meteorite, and there are many specimens in museums. The largest known meteorite is still where it fell at Grootfontein, South Africa. It is estimated to weigh about 60 tons.
