

ADVERTISEMENTS

To Feed and Take Care of Cows
An advertisement in the *Advertiser* has helped many
farmers, contribute the following brief rules as to feeding and taking care of cows.

The cows them three times a day,
at six o'clock in the morning, at noon and night.

It is not necessary that they
be watered up once a day, after feeding
at noon, when they should be turned out for that purpose, and let
out two or three hours if the weather is pleasant. It is stormy the best place
for them is the stable.

Stables should be cleaned twice
a day, in the morning before feeding
and when turned out for drink.

It is better for cows to go dry
three months in the year.

Two or three weeks before calving they should be fed some grain.
Oats are good, as they strengthen the
muscles and keep up the health. Oats and
corn ground together, equal parts, make
the best feed. If the cows are thin
in flesh, then give them four quarts of
this grain feed a day.

Curd them well once a day; salt
them once a week—being careful
not to give them too much salt in cold
weather.

Preventing White Butter in Churning
By raising the temperature of cream
high you get white butter. In summer
the temperature is apt to be thus,
especially in dog days, and hence
they white, frothy butter, and lots of it;
and it takes longer to bring it.
So in winter, with hot water, you
scald your butter as it is called.

All in the temperature. This when
high causes the sugar to ferment and
produce acid (lactic), and the acid acting
upon the milk salts, liberates the
casein or cheese principle, which then
curdles, and you have your white mass
of cheese and butter, much of the butter
has an undue quantity of cheese.

The remedy is, take care of the
temperature, not only in the cream
but in the milk and cream, before they
get there. This will then, absolutely,
be no difficulty. Fifty-five to
sixty degrees is the point, to aim at
from time the milk leaves the cow till
the butter has come. To keep your
windows shut in warm weather and
open when cold, the temperature is
secured.

Keeping Butter.

At a recent meeting of the
Dairymen's Association in Illinois, President
King remarked that he had been a
dealer in butter for thirty years, and
considered that May, June and July
predicated the heat, if properly made
dry, come hard, and be properly cured.
Most people salt to high. It should
all go to the pastries, it will keep
milk, cream, and sourcings of butter
room should all be kept, for four eons are certain to impart a
disagreeable flavor. Mr. King stated
that he knew a man to plane honey-
uckles and roses around the place
where his butter was made, for the
purpose of giving it an agreeable flavor.
This was a pleasant contrast, whatever
the influence on the dairy may have
been.—*Montgomery Farmer.*

A steamer passed through the Dutch
Gap, C. S., with a large tow, it being
the first vessel to go through since the
canal was cleared out by the great
flood.

The agents of a large German
firm purchased 100,000 acres of
land on the Elk river, in West Vir-
ginia, which they propose to people
with German immigrants.

The Sulphur Springs *Advertiser* says
Mr. A. J. Stewart, of Hopkins Co.,
Va., reports that he, with two small
boys, upon twenty acres of land culti-
vated, used 20,000 pounds of seed
potato, 500 bushels of corn, 500 bush-
els of potatoes, besides peas and pump-
kins in abundance.

A new horse disease has broken out
in Knoxville, Ky., and a number have
died. When the horses were first
noticed to sick, they were nearly blind
the eyes half swollen and the animals
unable to move. Every remedy was
applied that the most experienced in
the art could suggest, but all failed to stop the progress of
the disease. The heads of the animals
only seemed to be affected, though
the horses were as weak as to unable
to move. Twenty-four hours after
being attacked the horses died.

A movement has been set on foot
by prominent citizens of Lexington,
Ky., to provide educational facilities
for orphans left by the thousands of
colonial mothers of that State, who lost
their lives in the service of our country.
The intention is to bring these children
together where they can be preserved
from want and receive sufficient edu-
cation to enable them to procure their
own subsistence. In the purchase of a
suitable site and the erection of necess-
ary buildings, for this purpose, the
expenses will be necessary to ask aid.

For the benefit of the Orphans
in the State, the *Advertiser* at the price
of \$1000 per month, will publish
a weekly paper, entitled "The
Orphan's Friend," for the benefit
of the poor and destitute.

History of N. Y. Volunteers.
This is one of the kind. Everybody in N.
Y. is abundantly bound up in patriotic
affairs, and the *Advertiser* copy
is a good example.

With the exception of the
Great Atlantic & Pacific Rail-
road, the *Advertiser* is the best.
Send for *The Necropolis*.
