This is simply a wholesale adaptation of a practice that has long been attributed to the provident Russian peasants, who are in the habit of using plank wails to intercept the snow. The banks thus formed are said frequently to serve as the family water supply up to the month of August.

The average of European fortunes is below that of England and this country. Prince Schwartzenberg, the richest man in Austria, with 170 square miles of territory, was said to have left \$55,000.

100 when he died a few years ago. There are two or three noblemen in Germany who own over 100 square miles, but the largest German income is liter Krupp's of \$1,000,500, and the next, a little smaller, is the income of the Berlin Rothschild. The Orleans landy is said to have a fortune of \$150.-620,000. If the Orleans were poorte, chance of seeing one of them on the throne would be better. The Duke of Galiera, a Franco Italian sailway magnate, left \$55,000,000 in Italy in the past decade, and this is by far the largest personal fertune mentioned in Latin Europe. Teny are ago M. Leroy Beaulieu, a high athority, estimated that in Paris, with in 2,300,000 por long of them on the throne would be better. The Duke of Galiera, a Franco Italian sailway magnate, left \$55,000,000 in France and \$5,000,000 in Italy in the past decade, and this is by far the largest personal fertune mentioned in Latin Europe. Teny are probably thrice this number in New York.

A LIFE insurance compony whose advice, under the circumstances, may be taken as a sincere, tells its clients that the golden rule in cold weather is to keen the extremities warm. The first and meet important rule for the currying cut of this idea is never to be tightly shed. Boots or shoes that it closely towen the free circulation of the blood by pressure: but when, on the centracy they do not embrace the foot too firmly, the space left between the shoe and the space left between the shoe and the space left between the shoe and the proposition of the same and the circulation of the blood by pres

keen the extremities warn. The first and meet important rule for the carrying of this idea is never to be tightly shed. Boots or shoes that it closely present the free circulation of the blood by pressure: but when, on the contract, they do not embrace the foot too firmly, the space left between the shoe and the stocking has a good supply of warm air. The second rule is never to sit in damp shoes. It is often supposed that unless shoes are positively wet it is unnecessary to change them while the feet are ats. This is a great fallacy, for when the least dampness is absorbed into the set, in its evaporation it absorbs the head from the foot, and thus perspiration is daugerously checked. This can easily be proved by trying the experiment of agglecting the rule. The feet will be found cold and damp after a few minutes, although on taking off the shoe and examining it, it will appear to be quite try.

The segmen of the new your are not.

bind the first; 120 make up a band wundare so far succeeded as to create a small demand for their work, and the others have reaped neither pecuniary advantage nor fame. Which, being summed up in figures, indicates that of those who write one's chance of being one of the 50 novelists in some 3,000 who succeed is 1-70, and his chance of temaining in obscurity and neglect is tepresented by the fraction 326-350, which is rather a discouraging certainty. It is announced that the French rail-

of soda into hot water, and the subsequent solidification of the block furnishes heat equal to an ordinary coal fire, that will hast five or six hours. Acetic acid is a compound of carbop, hydrogen and oxygen. With these heat elements and the sada lasse, as chemists call it; these seems to be no scientific reason why the plan hight not be feasible.

How large a place in the affairs of Brooklyn is filled by the bridge is annually set forth in the reports of the officials charged with its control. Over 40.000,000 fares were paid in the year just ended, and the cars have carried in all over 260.000,000 people in the nine years of their operation. While the two cities have paid \$450,000 in the year towards the construction accounts for expenses growing out of the work of increasing facilities for travel on the structure, they have been paid back \$460,000 out of the surplus receipts from travel. The work of construction will soon be coupleted, and then the steadily increasing earnings will flow back into the treasuries of the two cities. The operation of the cable has been extremely successful, as the delays averaged less than a minute a day for the year.

In the legal profession the American woman is making her way against much

Potash as a sanitary means is univaled. Take about one tablespoonful of the clear potash to two quarts of warm water, and pour it into the pipes of the bathroom and closets, taking care that it does not come in contact with tin or zinc. A cleansing like this three times a week will wear that it proposed to the contact with the comblet.

athough on taking off the shoe and examining it, it will appear to be quite try.

The seamen of the new navy in the past were. The modern warships are sinost totally mastless and sailless creations. The masts are not used alone for the few sails, but coigns of vantage on which are bullet-proof shelters, in which are located the machine guns, those death-dealing deck-rakers which play bavoe with the crew of an enemy. The tailing gun is in use on our war vessels for lighting from aloft. These pieces, which can discharge, when required, 1,200 shots a minute, are intended to disable or kill the enemy's crew. Rapiding guns is not of this class. They are used to defend battle ships from the hapidly-moying torpedo boats. They are used to defend battle ships from the hapidly-moying torpedo boats. A rapid-fare armor penetrating gun is a necessity, and the development of this armor of warfare has progressed so far that the largest of these pieces is six inches in caliber, is fired with 38 pounds of powder, a projectile weighing 100 pounds and at the nite of six aimed shots a minute.

To all budding and aspiring authors way be commended the statistics converning novels given in a late English publication. During the last six years look and failed. These 1,600 books were written by 922 people, of whom 30 form a company far in advance of the rest, so far as popularity is convenied and 70 form a company far in advance of the rest, so far as popularity is convenied to a solution of the rest, so far as popularity is convenied to a solution of the rest, so far as popularity is convenied to a solution of the rest, so far as popularity is convenied to the solution of the rest, so far as popularity is convenied to the solution of the rest, so far as popularity is convenied to the solution of the rest, so far as popularity is convenient to the solution of

so lar succeeded as to create a others have reaped neither pecuniary sivantage nor fame. Which, being summed up in figures, indicates that of those who write one's chance of being one of the 50 novelists in some 3,000 who succeed is 1-70, and his chance of tensining in obscurity and neglect is represented by the fraction 328-330, which is rather a discouraging certainty. It is announced that the French railway and street cars are to be heated without what is commonly hown as fire. The practical application of this knowledge without what is commonly hown as fire. The practical application of chemical blood.

Saved by Chemical Blood.

A remarkable surgical operation was recently performed in the little village of Lyon Mountain, this State. It was the injection of chemical blood into the veins of Airs, Louise Christian. Mrs. Christian had been ill for a long time, and was apparently about to breathe her last, when the physician decided to inject a solution whose temperature and chemical with human blood, less the organic part. After exposing the radial artery they pierced it with a hypodermic needle, to which was attached an improvised apparatus capates with a surgical operation was certainly and the little village of Lyon Mountain, this State. A Gallant American.
We recently published an account of the presentation in Bombay of a medal to Lieut. Huddleston, of the Indian marine, says the Loudon Globe, for "the bravest deed of a year," and have since received particulars of an equally gallant attempt to save life made by the American champion long distance swimmer. long distance swimmer.

made by the American champion long distance swimmer.

In the winter the steamship Tangler, of Philadelphia, had an eventful voyage from Santiago de Cuba, and a sad accident occurred while the vessel lay at Ft. de France. Martinique. The second engineer. J. McFarland, well-known in Philadelphia, went into the water to bathe, and, being seized with cramps. gave a shriek and disappeared.

As there were several sharks in the vicinity, everybody hesitated before going to his rescue, but J. B. Johnston, the champion long-distance swimmer, of Philadelphia one of the crew of the Tangier, immped overboard, fully dressed, and for an hour continued to dive for the body. He finally rescued it, after a desperate conflict with two of the mancaters, in which he had to use his sheath knife to ward off their terocious attacks. Both Johnston and the drowned man were bitten in several places. McFarland was greatly respected by his shipmates, and was buried with full naval bonors, the French authorities of Marchique

These are Facts

Housekeepers Should Seriously Consider.

If you want the best food, you will be interested in the following facts, which show why "Royal" is the best baking powder, why it makes the best and most wholesome food, and why its use has become almost universal - its sale greater in this country than the sale of all other cream of tartar baking powders combined.

The Royal Baking Powder NEVER fails. It is absolutely pure and wholesome.

It is combined from the most approved and healthful ingredients.

It makes the finest flavored, most tender, delicious and wholesome food. It has greater leavening strength than

any other baking powder, and is therefore the cheapest... It never loses its strength, but will keep

fresh and of full leavening power until used. It acts slowly in the dough, so that none

of its strength is lost before the baking is completed.

It makes food that will keep sweet, moist and fresh longer, or that may be caten hot and fresh with impunity.

The reasons why the Royal Baking Powder is superior to all others in these respects are easily stated. One is because it is finade from chemically pure materials; another is because it is made with greater care and accuracy than any other. It is always uniform in composition and leavening power. It has been the standard baking powder since its introduction. The founder and conor of its business ever since is still at the head of its management. Thus all the

knowledge and skill attained by over a quarter of a century's experience is available in its present preparation. The consumer is not experimented upon by changes of formula that are constantly being made in other powders in an effort to get a mixture that will not "cake" or lose its strength, or that follow changes of proprietorship or manufacturers. The Royal Baking Powder is always certain and equal in its work; a teaspoonful does the same perfect work to-day that it did yesterday, or last week or month, or last year.

While the last teaspoonful in a can of Royal is as good as the first, other powders lose their strength after being made a short time, and particularly after the can is opened.

The exactness with which the active principle of each ingenient prior to mixing is ascertained by expert chemists; the actual prohibition enforced against the receipt into the works of an impure ingredient; the care with which the materials are dried, coated and prepared before their combinaand the precision in packing the powder so that it shall be delivered to the consumer in the perfect condition in which it leaves the factory, are some of the details which go to make the perfect "Royal."

The same means are not employed by other manufacturers. There have been a great many imitations of the Royal, but no equals. Pure materials are not employed, care is not taken in their preparation and combination, while in the great majority of baking powders alum is added to give them strength, while cheapening their cost. .

The great popularity and general use of the Royal Baking Powder attest its superiority.
