In France if a structural defect in a bicycle causes an injury to the person using it, the manufacturer is legally accountable for damages.

Miss Mary Philbrook, of Jersey City, is the first woman to be admitted to the bar of New Jersey. She is pretty and twenty-two years old.

Elizabeth Cady Stanton says that if she was Street Cleaning Commissioner of New York City, she would organize brigade of needy, deserving women to do the work, and it would be done.

If some archaeologist in the vest 5000 A. D., happens to dig up a fash ionable woman's costume of the present day, he will draw some very queer conclusious from it concerning the shape of its one-time wearer, predicts the Washington Pathfinder. Women wear big sleeves because they are "pretty." If a thing is pretty, that settles it with the conventional woman. Next thing one shall see society belles hanging themselves about with oil paintings and water colors in gold frames to make themselves "pretty."

New York City is to have a great Botanic Garden. At a meeting of the incorporators it was announced that the fund of \$250,000 has been subscribed in full. This insures an adequate Botanic Garden for the city, for those engaged in the enterprise have fulfilled the condition exacted by the Legislature on which \$500,000 is to furnished by the city for establishing such a garden, in addition to 250 acres in Bronx Park for its site. The land for the site has been provisionally selected; it lies on both sides of the Bronx River and is admirably suited for the purpose in view. The gentlemen who are engaged in this work are not satisfied with having raised the required \$250,000, which will be used as an endownment fund; but propose to go shead and increase the amount to \$500,000. the great cities of Europe have Botanic Gardens; in this country there is bu! one-the Shaw Gardens in St. Louis.

Harper's Weekly observes: The "honor system" of conducting college examinations without other precau tion against cheating than an agreement of the students not to cheat is generally known in the North as the Princeton system. It has been in successful operation at Princeton for a number of years, and its entire success there has advertised it as a system of great merit. But it is not a new thing in this country, nor did it originate at Princeton. The Weekly is informed that it has been in use at the University of Virginia ever since that university was foundel by Thomas Jefferson, and has succeeded perfectly there. In the rare cases where cheating has been practised in spite of it the dishonest student was varned by his fellows to leave college, and has done so. It has also been in use for ten years or more at the Vanderbilt University at Nashville, and possibly in other Southern colleges.

While inventors of high explosives are searching for elements from which to manufacture effective war materials it will be just as well, suggests the Washington Star, for them to turn their attention to the merits of ordinary home-made catsup, which now comes to the front with strong cisims for recognition as a powerful detonator. Mrs. Baxter, of Newtown, Long Island, has just been painfully and seriously wounded by the explosion of a bottle of this stuff, which she had withdrawn from its resting place for use on the table. It will be a mercy if her eight is preserved, while her sadly scarred in consequence of the splintered glass which flew about her. The sudder fermentation of the ingredients composing this usually harmiess mixture caused the trouble. The accident points to the necessity for the greatest care in the preparation of this commodity by amsteurs. Perhaps, too, it may give rise to the appearance of some new destructive compound in the market under the name, say, of
