CHAMBERRY CULTURE:

a sand hill, a marshy tract, and a running stream, are the three requisites for a cranberry bog. Nowhar are these things jumbled together in greater profusion than on Cape Cod, which in former days supplied the world with sea captains, so that it was traphelly related at plied the world with sea captains, so that it was truthfully related at one time that in a certain Cape Cop town, an entire street of seventy houses was taken up exclusively by the homes of sea captains. This Cape Cot has, with the decadence of sailing ships, taken upon itself the right to furnish the world with nearly all the cranberties used.

To prepare the soil, sand is spread To prepare the soil, and is spread evenly over the bog to a depth of six inches. In this sand young plants are set out, the roots being forced down through the sand to the loam underneath. The plants are set out in regular rows, about one foot apart.

Three years are required before the plants mature

plants mature. plans mature.

Sand is valuable in that it furnishes a smooth surface on which the vines may stretch. The tendrils from each plant lie flat on the sand, and as each plant lie flat on the sand, they pile up to a height of about six inches in the matured plants. Such chokes the growth of weeds, but does not interfere with the plants whose roots are in the loam beneath. The running stream is dammed above and below the bog, and a system of ditches irrigates the bog. In time of frost the bog is usually flooded at night and drained in the morning. This does not hurt the berries, but it accounts for much of the rheumatism on Cape Cod. Sand is valuable in that it furnish

but it accounts for much of the rheumatism on Cape Cod.

Berry picking begins early in September and lasts until either the berries are all picked or a frost has spoiled the crop. Usually the last of October ends the work. As all the boys and girls are needed in the season, the public schools begin the fall session late to accommodate the pickers. Numerous machines have been devised to pluck the berries, but it is claimed that all ruin the vines. Experiments by persons skilled in Experiments by persons skilled in cranberry picking are now being made, and it is believed that a satismade, and it is believed that a satisfactory machine will be produced. The champion hand-picker has a record of sixty measures in one day. At the usual rate of payment, he would make six dollars per day. Chief among the enemies of the cranberry are the angleworm and the fireworm. The angleworm eats his way around a small circle, and then eats within the circle. The fireworm

eats within the circle. The fireworm is less considerate, eating in all di-

Cranberry bogs are good invest-ments, when the sterility of this land is considered. As Joseph Jefferson

ments, when the sterility of this land is considered. As Joseph Jefferson remarked of his "crow's Nest" property: "Nothing will grow but weeds, and they grow wild."

A bog is worth about \$700 per acre. The usual output is 80 to 100 barrels per acre, and the price averages from \$7 to \$18 per barrel.

Salt marshes can not be used, and the sand must be near the bog to insure profitable working. Fancy names are quite popular, the "Silver Hill Bog" and Herring Pond Bog" being examples. being examples.

Mud as a Dressing.

Animals when wild constantly die a lingering death from injury to the skin, whether caused, as usually happens in tropical countries, by wounds aggravated by insects, or by cutaneous disease, says the Spec-tator. Hence the pains which they take in making their toilet, and in the use and selection of "cosmetics." Among birds the salt water species often seek fresh water to wash in; different land birds choose different arths in which to dust, and also wash in water, and nearly every tropical animal, including the tiger, bathes either in water or mud. Per-

bathes either in water or mud. Ferhaps the best known mud bathers are the wild bear, the water buffalo and the elephant. The latter has an inexpensive advantage over all other animals in the use of its trunk for dressing wounds. It is at once a syringe, a powdering puff and a hand. Water, mud and dust are the main "applications" used, though it sometims covers a sunscorched back with grass or leaves. "Wounded elephants," writes Sir Samuel Baker, "have a marvelous power of recoverery. When in their wild state, although they have no gifts of surgical ery. When in their wild state, although they have no gifte of surgical knowledge, their simple system is confised to plastering their wounds with mud or blowing dust upon the surface. Dust and mud comprises the entire pharmacopea of the elephant, and this is applied upon the most trivial as well as upon trivial as well as upon the most trivial as well as upon trivial as well as upon the most trivial as well as upon t most trivial as well as upon the most serious occasions. I have seen them, when in a tank, plaster up a bullet wound with mud taken from the bottom."

New Uses for Electricity.

Electricity is now used to seel canse of fruits and preserved meats. A conductive layer is formed on the lid of the can and a metal coating de-posited by the ordinary methods of electro-mating. The process is also having appreciate the sealing of bottles of gine, beer or chemicals.

Winter Clothes.

I suppose a good many of us are recrying about our winter coats. Some must raise the money to buy new ones, while others must have the old ones repaired or redeemed. Thinking very earnestly about mine, I ran almost into the clutches of the menagerie in Central Park, and it suddenly flashed over me: See what nature is doing for the animals! They are getting the most beautiful winter coats imaginable, and do not have to pay a cent for them. The deer are having new suits of finest fur, and the coats of the bison, the bear, the fox, the wolf, the possum, the raccoon, the camel and the prarie dog are all doubly thickened by nature's kindly thought to guard them from the cold of winter. The alpaca, the guanaco and the Angora goats, as well as our own sheep, such as the Southdown, and even the common Harlem goat, are putting on heavier overcoats. And man, the noblest work of God, must go out and hustle to keep from freezing to death.

A NEW LEASE OF LIFE,

GOOD HEALTH AT SEVENTY-THREE YEAR: OF AGE.

Miss Cornwall's Wonderful Recovery of Health—Became Well in Two Months Atter an Illness of Six Years.

From the Register, New Haven, Conn.
In this rapid age of ours when so many men and women are old at flity, one who has lived three-quarters of a century, and then, after debility and suffering, regains health and vigor, must be regarded with a feeling akin to wonder. A New England lady has been found who has had this remarkable experience

In the family of Clarence Williams, a Che-

lady has been found who has had this remarkable experience.

In the family of Clarence Williams, a Cheshire farmer on the Meriden road, Cheshire, Ct., lives Miss Cornella Cornwall, a lady seventy-three years of age. For several years Miss Cornwalls health has been declining very rapidly, caused by a general debility. Her friends feared that the respected lady had not long to live; but a kind Providence directed the aged lady, and in a newspaper advertisement Miss Cornwall read shout Dr. Williams' Pink Pills—a few boxe of which she procured at oge, and with the result that is best told in her own words. "About six years ago." Miss Cornwall began, "my beatht commenced to fall. I suffered from loss of appetite and pains in different parts of my body. My condition gradually grew wose until my limbs were apparently unable to bear my weight, and I could no longer go up stairs without the esistance of some one.

"I consulted physicians who prescribed madicines for my blood. These I continued to take for several months, but without he esistance of some one in the weight of the service of the local to take for several months, but without he usistance of some one. If concent of some one is a service of the pills. I was still suffering terribly from the pains through my body. When I chanced to read the story of a cure that had been effected with the use of Dr. Williams' Pink Pills for Pais People. I discovered that the town druggist here had none on sale, so I sent immediately to the headquarters in Schenoctady, N. T., and secured two of the boxes of the pills.

"Last December I commenced using the pills regularly, and a month after I had been taking them, I telt greatly benefited by their ase. The feeling in my limbs came back again, and in two months I was able to go about the house as I had been accustomed to a year before. Now, as you can see, I am enjoying good health. The pallor in my face was removed by the pills. A number of my friends in the neighborhood were complaining of symptoms somewhat similar to my own, an

How He Was Initiated.

A Springfield (Mass.) high school A Springfield (Mass.) high school boy was initiated into one of the school's societies the other day in a rather novel manner. His schoolmates persuaded two Italians to wheel their street piano in front of the building, and then the would be member commenced to grind outsuch classic music as "You Can't Play in my Yard" and "The Bowerry." After both arms were tired one of the Italians tied a rope around fits neck, and he collected more money than any monkey could. After filling the monkey's place to perter filling the monkey's place to per-fection for about five minutes he mounted the front steps and deliv-ered a short but appropriate speech.

Two Curious Duels.

In 1887 a curious duel was fought in Paris, when two rivals met at the house of their divinity. After a few high words, an immediate encounter was decided upon, says London Tit-Bits, and, neither swords nor pistols being at hand, two ornamental cross-bows were taken from the walls of the drawing room. An adjournment into the garden was made, and in a few minutes one of the lovers was plerced in the arm by his opponent's shaft. In 1891 a still more singular duel was fought, the weapons in this case being umbrellas. After a furious struggle one of the combatants fell, run fell, run through the eye, and soon afterwards died.

Timely Warning.

The great success of the chocolate preparations of the house of Walter Baker & Co. (established in 1780) has led to the placing on the market many misleading and unscrupulous imitations of their name, labels, and wrappers. Walter Baker & Co. are the oldest and largest manufacturers of pure and high-grade Cocoas and Chocolates on this continent. No chemicals are used in their manufactures.

Consumers should ask for, and be sure that they get, the genuine Walter Baker & Co.'s goods.

SAPOLIO germ-life

The doctors tell us, now-a-days, that disease germs are everywhere; in the air, in the water, in our food, clothes, money; that they get into our bodies, live there, thrive and grow, if they find anything to thrive on.

Consumption is the destruction of lung-tissue by

germs where the lung is too weak to conquer them. The remedy is strength—vital force.

Scott's Emulsion, with hypophosphites, means the adjustment of lung strength to overcome germ-life. It is fighting the germ with the odds in our favor. These tiny little drops of fat-food make their way into the system and re-fresh and re-invigorate it. Whether you succeed with it or not depends on how good a start the germs had, and how carefully you canlive. The shortest way to health is the patient one. The gain is often slow.
