If Trucks "Punched a Clock" Yours Would Be Stewarts

RECAUSE Stewart design eliminates the chief source of truck troubles that cost time and interrupt work.

An exclusive engineering principle enabled Stewart design to dispose of more than 600 parts, necessary in many makes, every one of which is a point of waste and wear—a vulnerable point in truck dependability.

If trucks punched a time-clock you would see at - a glance what this Stewart simplicity means in punctual, uninterrupted service.

You buy a chain of costly annoyances in an unreliable truck—time lost for repairs and adjustments, important shipments tied up work and workmen idle, customers disappointed—all because of your transportation failure.

Stewart trucks end all that. They insure posi tive, always ready, uninterrupted service. Yo know how prompt deliveries earn good will. In more than 200 lines of business in 27 countries Stewart trucks are chosen for their proved reliability

They continue to work, while trucks of complex design are being towed to repair stations, or

stand idle, waiting for the replacement of one or more of their parts. The value of Stewart durability is especially emphasized in service distant from repair and replacement depots.

"In Five Years No Stewart Truck Has Worn Out

And the first 50 are still giving economical and uninterrupted service.

Stewarts deliver more than 90% of power. And the reduction of unsprung weight relieves the tires and truck of racking, unbuffered blows and shocks that shorten the use of both. And Stewarts cost from \$200 to \$300 less than the average makes of equal capacity.

There are sizes to meet any truck requirement. Gra uated from the 3/4-ton truck to the 31/2-ton, hey serve every need from light city delivery up to the big heavy hauling jobs.

The selection of a truck is a basically important problem in any business. A comparison of Stewarts with any other truck will surely decide you in its favor.
