## Of Interest to Farmers

**6992 COWS TESTED IN SINGLE MONTH**  
And 1170 of them Gave 40 Pounds of Milk at Each of Butten-Fab. Experiment of Association Shows

Some indication of the work being accomplished by the cow testing associations is shown by the fact that during May, the last month for which a summary report has been made, 6992 cows were tested in the associations in the state, and that 1170 of these gave 40 pounds or more of butter fat. The Livonia Association of Livingston County led the rest with 189 of the 40 pound cows, while the Richville Association of St. Lawrence County was next with 167.

Two new associations, the Finger Lakes in Cayuga County, and the Holland Patent in Oneida County, were reported as starting June 1; and the Western Broome County Association told of a tour of several ordinary dairy farms with some labor saving machinery and convenient barn equipment to point out the advantages of testing work and to enable each member to know his neighbors better.

E. J. Peckham, whose cow Betty had the highest record for the year in the Chenango Valley Association, reported some interesting figures on the cost of the 14,441 pounds of milk and 517 pounds of butter fat Betty made during the year. The value of her milk was \$437.41 and her feed cost \$131.09, which left a balance of \$306.32 for her owner as pay for his labor, interest on his investment, and profit.

**POOR YEAR FOR FRUIT IS GOOD TIME TO CAN**  
Publication on Preserving Food Offered to Residents of New York Is Simple and Practical

In the poorest year for fruit which the United States has had for a long time, it becomes doubly necessary to preserve all that can be had.

In connection with this, Cornell has issued a timely bulletin on food preservation. This deals with canning and preserving and the setting, drying and various methods of storage. It describes various types of equipment and methods and gives recipes for canning and preserving fruits, vegetables and meats.

Copies of the bulletin will be sent, as long as the supply lasts, to those who apply for it. A post card request mentioning H. 136, addressed to the State College of Agriculture at Ithaca, will bring the publication.

**Agriographs**

Uncle Ab says: "I've seen a lot of smart farmers, but the best ones weren't too smart to learn even from city folks."

A reputation for honest weight and a uniform, high-grade product is just as valuable to the farmer as to the manufacturer.

Maybe you haven't thought of a cow testing association as a labor saving device, but it is. It frequently shows how to make ten cows do the work of fifteen.

The farmer who believes in playing safe is the one who is resolving about now not to let anything prevent him from selecting his own seed corn from his own fields.

The farmers who have taken their sons in as partners instead of as hired men are chuckling to themselves when their neighbors complain about the boys leaving the farm.

Forestry is concerned with the future as well as the present. It seems to place the woodlot in its best growing condition, and to keep it in a continuously productive state.

Agriculture is, of all industrial pursuits, the richest in facts and the poorest in their comprehension. Facts are like grains of sand which are moved by the wind, but principles are these same grains cemented into rocks. — Von Liebig.

**UNSHAKEN TESTIMONY**

Time is the test of truth. And Doan's Kidney Pills have stood the test in Andover. No Andover resident who suffers backache or annoying urinary ills can remain unconvinced by this twice-told testimony. Redolph Howland, Barney St., Andover, says: "I do a great deal of heavy lifting and I think I strained my back, which affected my kidneys. Many times when I was in a stooped position and tried to raise up, a sharp pain caught me in the small of my back and I could hardly straighten. My kidneys acted irregularly and the secretions were unnatural. As one of the family had used Doan's Kidney Pills with success, I used some from the Brundage Drug Co. They greatly relieved me in every respect." (Statement given October 5, 1916.)

On August 13, 1919, Mr. Howland said: "I am glad to recommend Doan's Kidney Pills for lame back and weak kidneys. I have had no trouble with my kidneys since Doan's cured me a long time ago."

At all dealers, Foster-Milburn Co., Inc., Buffalo, N. Y.

**THESE QUEENS REALLY ARE WORKED TO DEATH**  
But They're the Kind That Live in Bee-Hives, No Matter How to Rear, New Orleans.

Queen bees had little rest last winter, and the bee men at the state college at Ithaca say that even those which were new last year are likely to be worn out at the end of the present season and will need to be replaced.

Because of the mild winter, brood rearing continued unusually late last fall and started unusually early this spring, so that many queens have literally worked themselves to death. To prevent heavy losses next winter and spring these worn out queens must be replaced by young ones, according to the experts.

The best time for requeening depends on the honey flow. In localities where one main flow a year is the custom, it should be done in the last half of that flow; in places where the buckwheat and other late flowers cause a good later flow, the requeening is best done in the first half of the late flow. It should be done before the middle of August, say the experts.

Eggs for new queens are secured by allowing the old breeding queen to lay eggs in an empty comb placed in the center of the broad nest. She will usually fill the comb within a day or two, but it is best to look at it the day after it is placed so that one may know the date when most of the eggs were laid. He can then tell when the new queens will hatch, knowing that they will emerge from the eggs the sixteenth day after laying.

Full details on queen rearing will be furnished on application by the bee men at the State College of Agriculture at Ithaca.

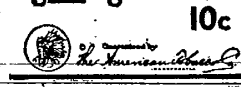

**WEATHER FAVORABLE FOR ALL FARM WORK**

The past week was very favorable for all crop growth and farm operations, according to the summary of weather and crop conditions for the week ending July 26th, sent out from the Ithaca office of the Weather Bureau. The heavy rains of the first part which relieved the drought in practically all sections, were followed by fair warm weather, excellent for harvesting. Hail and wind on the 20th did considerable damage to growing crops in Clinton and Washington Counties. All farm work is generally ahead of the average.

The wheat and rye harvests are about completed and thrashing has begun. Corn continues to make exceptionally rapid growth. Potatoes continue unchanged with the extension of reports of blights from some sections. Buckwheat and barley continue good, with some buckwheat in bloom in the southern part of the state.

The oat harvest is generally well under way. Haying has been completed in many sections and the crop is generally better than was at first expected. The second crop of alfalfa has been harvested in most districts; reports indicate an excellent yield. Pastures were very generally improved by the rains.
