

HAVE YOU "GOOD LUCK"

The "good luck" that goes hand-in-hand with success does not merely happen, but is the result of sensible plans and well-directed effort.

Thrift brings what the unthinking man calls "good luck." The thrifty man lives within his income always, saves constantly and invests prudently. He puts his surplus to work to earn interest for him. This thrift habit inevitably brings money and wealth.

If you have a Savings Account now, make it grow. If you have not started an account, do so right now. It will be the beginning of better things for you.

Andover State Bank

A. C. FRISBEY, Chairman
J. M. BRUNDAGE, Pres. FRANK S. CLARK, Vice Pres.
A. D. FULLER, Cash.

reunion held at the home of C. A. Page at Alfred Station, Saturday.

Christian Chronology. Ready to explain the simple matter, through its history, a little explanation.

Using the birth of Our Lord as a starting point for counting time did not become general until the Christian religion had made considerable progress. Some confusion has been overlooked the fact that the ancient nations had their own systems and their own starting points.

For instance, the Romans counted from the founding of their city, Rome, and when Our Lord was born it was the year 753 according to Roman chronology. Having taken the year in which Our Lord was born as the starting point of the new or Christian chronology, the years preceding that starting point could only be counted as years before Christ and the farther you go back into the past the greater the number the farther you come down from the starting point towards the present. There is nothing confusing in this, and the same principle is applied on any through railway timetable. A transcontinental time-table counts distances from a terminal both ways, one way east and the other way west. In our chronology the year of the birth of Our Lord is the starting point, and the years are

not have passed since that event. The system is of course the same only in Christian countries. The Jews begin to count from the creation, and there is no counting backwards because it is impossible to go back of that event.

Maths in "Maths"

Methods of instruction in mathematics are being utilized at Huntingdon school here. Geometry, a dull subject in other days, is said to have become almost a thing of joy. Text-books are used, but only after an appetite for solids, surfaces and space has been created and stimulated by lines that move and by animated angles.

Charles H. Sampson, the instructor, says he uses two reels of 1,000 feet each. "The purpose," he says, "is not to teach geometry but rather to gain a valuable aid in the teaching of it." "The subject is introduced on the film by a Japanese juggler. He appears with a basket filled with geometrical figures of all kinds which he juggles with skill. Thus the students are early interested in the general subject. Because too few students appreciate the value of the historical background there is next introduced a series of short life sketches."—Boston Dispatch in the New York Tribune.
