

The Farmer's Problem

Wise economists appreciate the fact that prosperity cannot be universal until the prices paid the farmer and the prices he pays some one else are equalized.

The farmer must either be paid more or he must pay less.

A keen appreciation of the farmers' problem and a sincere desire to help in every way possible characterizes our relations with farmer patrons.

The Only Help That Helps

When a man has a cold, or has bought an automobile, or is about to build a new home, he needs protection. Then it is that every relative and friend feels called upon to pour out advice—to tell him what to do and what not to do.

Poor man. Friends mean well. But most of them don't know. The only good thing that can be said for the common variety of advice is that it's cheap. And like the average cheap thing, it isn't worth much.

When you have a cold, see a doctor. When you want to know about an automobile, ask an automobile man. When you go to build a home, go to men who make home-building a business.

Plumbing and heating can make or break a home. If the home is plumbed right and heated right, the whole family is healthy and happy. If it isn't the family is sickly or tired and miserable.

And that isn't just friendly advice. It's the advice of men who know—who make it a business to give you the help that helps—the kind you need when you build.
