"The Most Feathers With the Least Squawk"

A shrewd politician once observed that the ideal tax is the one that "plucks the most feathers with the least squawk."

From the politician's standpoint this is possibly true. But from the public's point of view the more directly a tax is felt, the less likelihood there is of governmental waste and extravagance.

In this connection, it is surprising how few people know that Niagara power is taxed at the source of production. Out of every dollar The Niagara Falls Power Company receives for the power it sells, 17 cents go to pay for taxes.

Necessarily this operating expense is part of the cost of production. It is only by the utmost economy and efficiency of operation that The Niagara Falls Power Company is able to sell its electricity, as it does, at the lowest average price received by any generating system on the North American Continent.
