Wrapping each piece of home-made candy in oil paper will help to keen it from drying out when sent thru the mails.

Have you your copy of the food-value chart? It's free and a card with your name and address on it asking the state college at Ithaca for E 71 will bring it to you.

Wash your windows the easy way with a piece of chamois skin fifteen to eighteen inches square wrung out of warm water. Dry with the same chamois wrung from clean water.

A good short cut in butchering that—saves the men's time and the women's efforts is to run the lard fat thru the meat grinder. It makes better lard in less time than the old squeezing process.

Dear Miss Flo: Recently a relative of mine died and friends sent flowers. Would it be proper to publish a card of thanks in the newspaper or should a personal note of thanks be sent to each friend? (2) If the latter is correct, will you kindly give me a form which I could use. A. K.

HORNELL, N. Y

Soil and Climate Make Them Profi-table Catch Crop Says Apate College of Agriculture.

New York State was the pionee

New York State was the pioneer in bean production some 80 years ago, and is still well in the lead, ranking fourth in the last census. Much of its yield is in western New York, where the length of the season and the ordinary dry weather at harvest time are especially favorable to this crop.

A new bulletin of the state college of agriculture at Ithaca, N. Y., has summarized the available information on growing and marketing field beans, with especial attention given to the different problems of growing in the several sections of the state. In this bulletin, Prof. E. V. Hardenburg, the autitor, says that type of soil is more important than actual soil fertility with the bean crop. Since the plant is very sensitive to soil temperature and moisture conditions, a soil of medium texture is best. He stresses particularly the preparation of the seed bed. Planting in heavy, wet or cold soils is likely to result in the rotting of the seed, slow germination, and in a poor stand of yellow, weak plants.

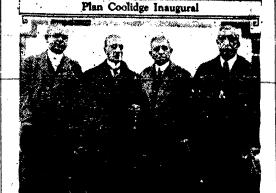

Drought likewise has to be guarded against he seve so to be called and the coll and against he seve and against and the coll and against he seve and against and the seve and against he seve and against and the seve and against he seve and against and the seve and against he seve and against and the seve and against and the seve and against and the seve and against he seve and against and the sever and the sever and the sever and against and the sever and

Drought likewise has to be guarded against, he says, and a soil well drained, either naturally or artifically, is almost necessary for profitable hear growing ally, is almost nece table bean growing.

table bean growing.

Since peas and medium beans can be matured in a relatively short season, the crop is often grown after a failure of winter wheat, corn, or potatoes. Prof. Hardenburg says that beans, in fact, first became popular in western New York as a catch crop. A common rotation in the bean belt is beans, winter wheat, clover and timothy, a four year system.

Other particulars about fertili-zers, planting, cultivation, diseases

and similar problems are discussed at length in this bulletin, E 98 which anyone can get by writing to the state college for it.

Getting the Expression.

The beautiful movie actress could roll her eyes and arch her brows, but she couldn't seem to get her finer shades. So the director thought he would try a little strategy.

"Now, Miss Respiendent, we shall have to shoot that scene again."

She took her position.
"Register indignation. Your last effort was rotten."

"Sir-r-r!"
"Hold it. That's more like indig-
