### MORE ABOUT FAT

Nearly every week I am beset with pleas for "something that will help me reduce." So, listen, ye fat people—especially the sisters. No use to talk to the fat boys—they'd rather be fat! Therefore, my good ladies, this is expressly for you.

The latest (and I truly believe best) advice is, DON'T ADOPT A POPULAR FAD. Don't go on a diet of carrots, or spinach, or starch-free bosh—nor on any "one-piece foder." Stick to a VARIETY of food, and keep your health and strength—fat or lean. I am treating a lady at this time, age 40; five feet tall; weighs 194. Her flesh is firm, and her circulation ideal. Nothing wrong anywhere—only overweight, and it's solid muscle—not adipose. Even correct mental poise. Happy disposition. Want to know my advice to her? Here it is:

"Now, I want you to go about this thing in a sensible way. Eat of anything you like, just so it's a wide variety. I want plenty of green stuff—plenty of fruits and vegetables. If anything is cut down severely, let's it be the things that grow beneath the surface of the garden. Turnips, carrots, beets, rutabagas, potatoes—better gaze from afar on these, if anything is cut out entirely. And here: You eat just HALF of what you've been consuming. Do the halving yourself. Leave half on the dish. It's easy. Half-glass of milk. Half a piece of pie; one slice of bacon, if used to two. Half-cup coffee. If two biscuits, use one. Remember—just HALF of every dish you've been using. Obey me to the letter—and come back in one week to weigh."

This good lady had gotten down to two meals a day! And ate the major portion of a half-bushel at each—mostly carrots and spinach!

Now, you'll be listening at the key-hole to hear how this girl gets alone. If I have luck I'll tell you about results later.

One ton of manure plus 50 pounds of superphosphate makes a well-balanced fertilizer.

The reduction in wheat acreage asked by the secretary of agriculture for the 1933 seeding is 15 per cent.

Clean flower beds and borders of dead and dying growths which afford a place for plant diseases to develop.

A flock of 100 white leghorn pullets must eat from 24 to 25 pounds of mash and grain daily.

The August farm price index was 72 compared to 76 in July, to 64 in June, and 59 in August 1932. These are based on the average of the years 1910 to 1914, which is set at 100.

On 69 of the 86 days from April 19 to July 3, the prices of 17 basic commodities moved in the same direction as the value of the dollar on either the same or the following day.

Uncle Ab says he wonders how many persons will change their jobs—when there are jobs to change.

The 1933 New York State apple crop is estimated at 16,425,000 bushels, or 5,772,000 bushels less than last year.

More than six million bushels of potatoes, or 16 per cent. of the normal New York State crop, are unfit for food or seed. Much of this loss can be prevented by more careful harvesting and better storage. The free Cornell bulletin E-141 suggests ways to reduce this loss.
