## The Finest FORD CAR Ever Built NEW FORD V-8 For 1934

Ford engineering and manufacturing methods made the V-8 type engine available in a low cost car. The Ford is the only car under \$2,000 with a V-type engine. But Ford didn't stop there. For 1934 the engine has been materially improved. It is now the most economical car to operate ever built by the Ford Motor Company.

More miles per gallon, quicker starting in cold weather, greater power, more speed and smoother performance are obtained with the new Dual Carburetor and Dual Manifold. A new built-in ventilation system gives desired fresh air without drafts and does not obstruct the vision.

There are many other refinements which we want you to see. If you can't visit, phone and we will bring a car to you, without
