Mr. and Mrs. Lee Millsbaugh and daughter of Andover were Sunday evening dinner guests of Mr. and Mrs. Rho Leach.

Mr. and Mrs. Lawrence McCracken and children and Miss Jean Millsbaugh of Andover were dinner guests of Mrs. Ella Millsbaugh Sunday evening.

Germany's natural supply of helium is so limited, German scientists say, that it would take 400 years to fill the Graf Zeppelin with helium from Germany's four known deposits.

HOW, WHAT and WHY?

The Andover News has arranged with the Office of Information of the New York State College of Agriculture and Home Economics to answer questions about problems of farm and home. If you enclose a self-addressed, stamped envelope and mention the name of this paper, you will receive a direct reply to your query from the colleges. Do not ask more than one question in one letter or on one post card. Ask as many questions as you like, but make each one a separate communication.

Peach Tree Suffers

C. H. L., King Ferry, writes: "The leaves on my peach tree are dropping off, and the tree is now nearly bare. I sprayed the tree with a solution of Black Leaf 40, sulphur, and lead arsenate. The tree was set out two years ago. Can you tell me what is wrong?"

Professor H. H. Wetzel of the plant pathology department answers: "It is impossible to tell from your letter what is causing the peach leaves to fall. The chances are that the lead arsenate which you included in the spray is responsible. Lead arsenate is often very injurious to peaches."

"I can tell more accurately if you send me some of the fallen leaves and small twigs which still have some of the leaves on them. Put the leaves and twigs between the folds of a newspaper, roll them up, and send them. Include plenty of material showing different stages in the leaf injury."

Making a Watering Trough

G. W. E., Fort Plain, says: "I wish to build a round concrete trough to water our stock. It is to be out-of-doors and as frost-proof as possible. I wonder, however, if a cheap wooden trough, treated with some substance to keep the wood dry, would be practical?"

Professor A. M. Goodman of the department of agricultural engineering, replies: "We have sent you a copy of the publication 'Concrete on the Dairy Farm,' which suggests ways to build watering tanks. Diagrams show the size and weight of reinforcing material to use as well as the thickness of the walls."

"The greatest strain on a watering trough comes when ice forms in it. The pressure from freezing and thawing is great enough to crack many tanks. To prevent this, build the tank so that the distance across the top of the tank on the inside is much larger than at the bottom."

"With a tank of this kind, the ice may slip on the side walls and prevent cracking when the ice pressure becomes heavy. For a tank two feet wide, I suggest that it be one foot wider at the top than at the bottom. For a circular tank four or five feet in diameter, I suggest that the tank be a foot and a half greater in diameter at the top than at the bottom."

"If you make a wooden tank, do not try to use a cheap one. A cypress tank, the tub type, is good. If you make a rectangular tank, use two inch material with the ends and bottom cut into the sides and the sides held together by iron rods with half-thru iron plates which extend from top to bottom of the tank. While dry, this tank should be given two or three coats of some good oil paint or a good white lead paint. The wood should be dry before it is painted, and the paint should be allowed to cure about two weeks before water is put into the tank."

URGES STUDY OF PRICE OF FOOD

Dr. Howe, Consumers' Council of Agricultural Adjustment Administration, Warns Against Undue Rises.

Consumers throughout the nation are warned by Dr. Frederic C. Howe, consumers' counsel of the Agricultural Adjustment Administration, against false rumors about the effect of the drought on the food situation, lest they be victimized by unjustified price advances.

Dr. Howe asserts that exaggerated reports are being spread about prospective increases in the price of foods. "Consumers should follow closely official reports on the movement of food supplies and prices," he says. "This will help them to buy wisely and economically and to detect unwarranted price increases."

The present concern is not over increased prices to farmers but, rather, over possible unwarranted spread between prices received by farmers and prices paid by consumers. Dr. Howe says, "Farmers are still getting only a little more than a third of the consumer's food dollar compared to the years from 1924 to 1929 when they received almost half. In getting a fair share of the consumer's dollar to the farmer, part of the problem is keeping marketing costs from rising substantially."

Dr. Howe says that some food prices will undoubtedly rise, partly in line with usual seasonal changes and partly because of drought-reduced supplies, but supplies of so many foods will be normal or above and the rest so near normal that no one need fear a shortage.

When the first alluvial diamond was found in South Africa, in 1867, it was thought the stone was a topaz.

FOR RENT

FOR RENT—The Matison property on North Main street. Inquire of Mrs. Rose Matison.

Twice a Month Payments Advocated for Dairymen

More than 200 dairymen who deliver to the Samuel Adler plant at Fort Plain will receive checks on October 5th for milk delivered the first half of September. The new payment plan was agreed upon with the Division of Milk Control officials when Mr. Adler could not deposit the full bond asked for by the Division. Beginning with the October 5th payment, the payments will be made every two weeks on the 5th and 20th of the month but will be advanced one day each month until the payments are made on the 1st and 15th. This is in line with Commissioner Baldwin's announced policy that effort should be made to shorten the time that dairymen must wait for milk payments.

moving to Rochester, where Mr. Whiting has a position with a leading undertaking establishment.

Rev. L. N. Berkhart has returned to his home in Evansville, Ill., after passing some time with his sister, Mrs. F. J. Raufenbarth. Miss Josephine Raufenbarth accompanied him home.
