It is always news when Henry Ford introduces a new car. Three years ago he startled the Automobile Industry by bringing out a V-8 at a low price.

For 1935 he is presenting

CENTER POISE RIDING

an important advance in Motor Car Comfort--It makes the ride a Glide!

The reason for the remarkable comfort of the New Ford V-8 is a fundamental change in automobile design, with new weight distribution—new seat position—and new development in spring sus-

You Ride Forward toward the center of the car away from the rear axle and away from the bumps. Hence the name Center Poise Riding.

For almost the first time a car has been specially designed to give real comfort to back seat passengers.

The wider, roomier, longer New V-8 for 1935 will be introduced Saturday, December 29th—and we will have them on display in our show rooms.

Please accept our invitation to see it and learn the full story of its distinctive new features, including the new easy-pressure clutch and new designed self-centering brakes.

The fine car comfort and fine car performance makes it an outstanding value. . . . The luxuriousness of its upholstery afti appointments has never been approached in a low-priced car.
