A New Crisis in Europe

THE sudden turn of affairs brought about by the famous Franco-British "peace plan blunder" has of territorial acquisition and we have no argument precipitated a new crisis in Europe that makes a con-start or settle with any nation, yet the belligerent acts The best that can possibly be done tinental war far more imminent than before.

presented without so much as a conference with Ethio-|ture victim if it is not prepared to defend itself. pia and was without justice or reason. It was in diaction of the league.

The goat of the diplomatic blunder was Sir Sam. prove conclusively that the greatest threat of our na would like some suggestions on how uel Hoare, foreign minister of England, who was forced tion is from the air. to resign following the open hostility to the plan by the populace of the nations of all members of the league including England and France. The mistake

The development that has caused the real stir in His natural aptitude for leadership and readiness never be placed in a direct draft Italy to the utmost including the much talked of oil children, and should play as well as work. embargo. It is the prediction of those who are com | A survey of methods used in dealing with those the latter part of January. petent to judge the coming events in the situation of more than average intelligence shows that in some ! "After the blooms have faded." that a showdown between Italy and the league is not schools they may skip a grade. Another method is to the flower stalks should be cut down far distant. Mussolini has served warring that he will provide special classes. The "segingated" class, if to about four inches from the sur not tolerate sanctions that his at his military forces wisely administered, should not lead to egotism or so face of the soil and the nots stored and the full strength of the Teague boycott would cial scobbishness, experience shows. That it may do away in the cellar or some semi dar strike most swelv or the heart of his military opera |this is easily recognized.

There are just two courses of action open for the gifted childe school life may take the form of special fiery dictator. One is to wage onen warfare against assignments in the regular class, each as club work. all League members, porticularly the leaders. France or group projects carried on under the teacher's ouid and England; or be can retire into obscurity admitting ance. This leads to the formation of activity units defeat. It is not likely that he will follow the Jotter which have proved to be the most promising method Town of Andover, County of Alley course, thus the European conflict become large on the for condinating the entire program sound a central

The new minister, Eden, has proven his strong leadership in the efforts he has already put forth to enforce immediate and complete sanctions against i' Italy. Only the action of Hoare in countering with a peace offer to Italy has staved off the will of this youthful leader to date. Italy immediately took the appointment of Sir Anthony as a direct slap because IN THE early days, woman was something of a chattel Italians have already learned to dislike him intensely -a possession of mankind, to be disposed of as his Jan. 8th, from 9 o'clock a. m. to 12 because of his attitude at Geneva at the sanctions par |fancy might decree.

preparations that smack of expected conflict. Some new and unexpected development may yet! gloomy at present.

Charting the Course for

THE recent stirring address of Prince Ernst Von Star-, hemberg, Austria's vice-chancellor and virtual dic-! tator, before a great gathering of his people, gives a clear cut picture of the aspirations of this strong leader and an indication of what may happen in the strife! torn hulk of what was once a powerful nation.

His open bid for the restoration of Hapsburg! dynasty in the person of Otto, heir to the crown, pres- DEGARDLESS of what may be said to the contrary, happy history of that country during the past few sentiment is a big factor in business. Friendship.

In his address, Starhemberg stated that the destin- values being equal, than all the cleverness and high ies of the fatherland and the formal royal reign were powered sales talks in the world. identical and that if Australians were thinking more and more of the monarchist form of government that cause its counters are arranged in an attractive way. there is nothing in their hopes and aspirations which but because the folks who serve you are friendly and is contrary to the concepts of the Austrian government as it is now constituted. Such a strong invitation for

er time than is expected. The bitter opposition of the little entente toward the return of the Hapsburgs may be alleviated to no little extent by the other important feature of his reason why you will find it decidedly to your advantage to trade with the advertisers in this paper—to buy message which embodied a warning to his people that where your friends will see that you are well satisfied. they should strongly resist the threat of Hitlerism. The growing enmity between Austria and Germany, fanned into flame by the assassination of Chancellor the quality, the variety and they give big values. Dolfuss, was thus openly indicated. The little entente should be far less perturbed by a strong Austria to act as a curb to the Hitler threat than to the return of the royal house of Austia to which they attribute former oppression.

Pessimists form their opinions of things and people before they take a look.

After eating onions, look at the grocery bill. It will take your breath away.

If this country isn't the greatest place in the

Improving Our Air Defense

▲ MOST important development toward a program of A better aerial defense comes with the announcement hat 100 new swift attack planes have been ordered by e government to bolster the strength of the general headquarters defense.

These new ships will be able to fly at a speed of 250 miles per hour with machine guns, large and sma crew. Such craft fill an urgent need in bringing our ir fighting equipment forward to the point of adequate defense standards, but much is yet to be done to reach JAN. 10, 1936 the goal that should be the ultimate achievement. The pacifist element decries any move toward ad- "In the first place, the two eggditional armament, recent attacks being directed to laping tests in upper New York ward the enlarging of our air fleet, but common sense State, the central test at Horse-

A. D. FULLER, Secretary.

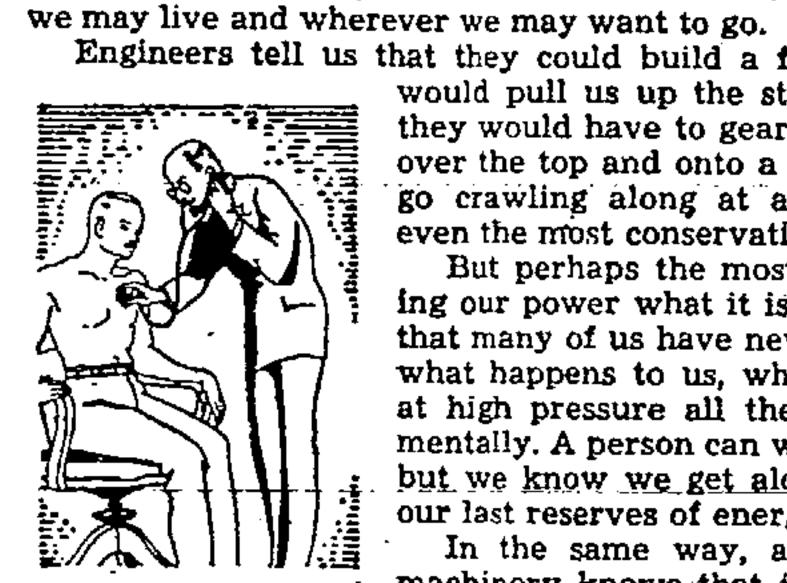

No. 6—POWER AND SPEED

Aost of our motor cars will go so much faster than we ever care to drive IVI them, that no doubt people often wonder why so much speed is built into them in the first place. Of course, automobiles aren't built with the idea of pleasing the manufacturer or the engineer or the

who are going to own and drive them. And there are certain things that people do insist on in their cars. It happens that some of those things are of such a nature that when the engineers provide them, an ability to go fast just naturally results. For instance, nearly everybody likes to get going as promptly as possible. Now that's just a matter of the power we have in our engine and how our car is

salesman. They're built to suit the men and women

Then there's the business of hill-climbing. That may not mean as much in some localities as in others. but cars have to be built to suit us whether we live in Maine or Florida, Iowa or California—wherever

Engineers tell us that they could build a fairly low-powered car that would pull us up the steepest hill. But if they did, they would have to gear it so low that when we got over the top and onto a level stretch, we could only go crawling along at a rate that wouldn't satisfy even the most conservative drivers. But perhaps the most important reason for having our power what it is in modern cars, is a matter

that many of us have never considered. We all know what happens to us. when we, ourselves, are going at high pressure all the time, either physically or mentally. A person can work 12, 14 or 16 hours a day. but we know we get along best when we don't tax our last reserves of energy all the time. In the same way, anybody who has ever run, machinery knows that if you keep it going at full

capacity and full speed day-in-and-day-out, you're just multiplying the chances of a breakdown, sooner or later. And that's how it is with a car. By building in the ability to run at high speed, engineers make it practical to run at reasonable speed. If our car can go seventy, eighty or maybe even more miles an hour then it won't have to strain to go thirty-five, forty. or somewhat faster if circumstances demand. So we can drive it along at sensible speeds hour after hour. lay after day, without over-working it.

heavier loads than the weight of all the people they can hold. So could modern bridges. The steel girders of our buildings, the rails under our trains—in fact. any number of things we depend on day-by-dayare much stronger than they really have to be. They all have that extra margin of protection. So with our cars, what we have to remember is that speed is simply a by-product of power. We can use that power unwisely, or we can use it sensibly and get better performance and dependability as the result. Manufacturers

can't decide that. It's all up to us.
