

The Advancement of Science

BY GEORGE NORTHRUP JACK, M. D.

The Physical and Chemical Origin of Sickness

Living autolysis and or dead organic putrefactive alkaloids, toxins substances and or chemical viruses.

CLASS A.

Example:

Certain sicknesses that are precipitated by (a) Physical Sickness, (b) Physico-Chemical Sickness (c) Special Gas Sickness.

Example:

(a) Burns, scalds, heat retention, X-Ray cancer, radium cancer, radio short wave length vibration fever, radio ordinary wave length insanity, aeroplane and dynamite explosion, violent concussions blood grandulopemia or loss of blood grandular cells, insanity, shell shock.

(b) Blood disintegrating atmospheric gas sickness, measles, malarial fever, African sleeping sickness, Yellow fever, tropical jungle fever.

(c) Special blood disintegrating gas sickness as end metabolic barn gas bovine tuberculosis, septic abortion, undulant fever, equine blindness or glanders. The above sicknesses generate through autolysis putrefactive alkaloidal toxins substances and or chemical viruses that make them noxious, contagious, infectious and capable of transmission by contact, blood transfusion, milk, food, etc.

CLASS B.

Dead organic putrefactive alkaloidal toxins, substances and or chemical viruses precipitate water born epidemic typhoid fever, Asiatic cholera, etc.

Well Known

Chemical viruses are well known under the name of organic germ viruses.

Chemical Sickness

Chemical sickness due to chemical poisons is well known, poison ivy, primrose, larkspur, poison oak, milkweed fever among cows.

Special Gas Sickness

War gases, carbon monoxide, refrigerating gases, sewer gases, natural fuel ground gases, mine gases, etc.

No Change

The advancement of science, through the discovery of the Physical and Chemical Origin of Sickness shows that the people of the earth are well protected from chemical sickness, or about 33 1/3 % of all sickness, whereas they have no protection from Physical sickness or Physico-Chemical sickness, that causes at least 66 2/3 % of all sickness.

Chemical Sickness

Acidosis, Alkalosis. Chemical sickness due to either a prolonged acidosis, or a prolonged alkalosis is very common.

A prolonged acidosis or a prolonged alkalosis often presents all the symptoms of tuberculosis or cancer.

Acidosis

A prolonged acidosis due to a faulty one-sided diet, from taking too much fat, cod liver oil, butter, cream, glycerine, castor oil and milk, together with fat meat, nearly cost me my life. I still have scars from this fatty acidosis sickness, that I will carry through life.

Fatty Acidosis Sickness

Ulcers in larynx, spitting of blood, severe pain, fever and prostration.

Bronchial Pneumonia

Fatty ulcers extend to the trachea, bronchioles and air cells producing fatty acid pneumonia.

Convalescence

Convalescence resembled an unresolved pneumonia.

Sequela

Mediastinum abscess, six months after returned to work. The abscess resembled pneumonia, and finally eroded into the pericardium. The crystalline chemical viruses entering the pericardium and synovial fluid was pumped with my lymph propulsion and exchange through the pericardial lymph spaces up the left side of the neck and down the left side to thigh. These putrefactive alkaloidal crystals or putrefactive alkaloidal chemical viruses burned like live coals of fire. The burning pain was so severe it necessitated morphine.

Heat

Hot antipylgistic poultices applied to the painful region melted the putrefactive alkaloidal crystalline viruses, giving immediate relief.

Recovery

Recovery soon followed this final manifestation.

Scar

The scars from these putrefactive alkaloidal chemical viruses left me an aortic fibrillation and a acid sickness susceptibility.

Alkalosis

I have had two patients, suffering from a prolonged alkalosis who came to me, after being treated for tuberculosis in two different institutions for tuberculosis.

Recovery

Both patients made a satisfactory recovery with a scientific, indicated, acid treatment.

No Excuse

A knowledge of the power of putrefactive alkaloidal chemical viruses to produce sickness, shows that they are the most powerful poison known. It has been estimated that putrefactive alkaloids are such a powerful poison that half a dram properly distributed would poison a nation.

Fire

Crystalline, putrefactive, alkaloidal toxins, substances and or chemical viruses resemble coals of fire. Coals of fire that start animal fires resembling forest fires.

Lack of Knowledge

A knowledge of my blood disintegrating gas groups, poison gases, chemical putrefactive alkaloidal toxins, substances and chemical viruses, — radio short wave fever — war gases — refrigerating gases — aeroplane and radio destructive vibration weather and destructive vibration sickness, leave no excuse for imaginary living germs or harmless pollen dust, the open atmospheric air, as a cause of epidemic sickness.

PART II.

Origin of Life

The physical and chemical origin of life as worked out by John Wesley, Jacques Loeb, Crile, English Biochemists and myself.

Not a Part

Life is not a part of the great universal scientific laws but a mere transient, temporary, by-product of destructive vibrations becoming vital vibrations.

I added vibrating to an English biochemist's discovery — cannot recall name.

Life and Health. A complex, vibrating physical, physico-chemical and chemical vital compatability, with a sustaining, complex, vibrating, physical, physico-chemical and or chemical incompatibility.

Sickness and Death. In sickness and death, "Sustaining" is changed to "Destructive."

LIFE CLASSIFICATION

Life is classified into two classes.

I.

THE UNSTABLE BLOOD COMPLEX

In the unstable blood complex destructive incompatible disturbances occur from slight physical, physico-chemical or chemical incompatibility. Destructive physical, physico-chemical and chemical incompatibility is clinically manifested as asthma, summer autumnal coryza (hay fever) urticaria, hives, angio edema, functional viscero vascular crises, rheumatism, migraine, arthritis, eczema and allied conditions.

II.

THE STABLE BLOOD COMPLEX

Disturbances in the stable blood complex due to destructive incompatibility through destructive physical, physico-chemical and chemical incompatibility are clinically manifested as sickness of all types or kinds and deaths of all varieties and kinds.

GENERAL CLASSIFICATION OF SICKNESS

Sickness is divided into three great classes.

I.

Complex, Physical Sickness, 33 1/3 %

II.

Specific, Chemical Sickness, 33 1/3 %

III.

Complex, Physico-Chemical Sickness 33 1/3 %

SYMPTOM CLASSIFICATION OF SICKNESS

I.

Complex, Physical Sickness

(A) Heat, Humidity, Retention Blood Disintegration, Asthma, heat exhaustion, heat prostration, cholera infantum, cholera morbus.

(B) Humid Blood Congealing, Chilly or freezing blood pneumonia.

(C) Altitude, low Oxygen tension Blood Disintegrations, asthma, sudden deaths.

(D) Caisson, low oxygen tension, asthma, sudden deaths.

(E) Heat Aridity, Asthma, heat cramps, heat exhaustion, blood disintegration.

(F) Freezing Aridity, Asthma, from congestion of air tubes, frozen extremities, death from freezing.

(G) Burns and Scalds. Death direct from blood disintegrations, death indirectly from autolysis, putrefactive alkaloids, crystalline toxins substances and of chemical crystalline viruses.

(H) Traumatism. Sudden death from hemorrhage, sudden death from shock, post traumatic adhesions, scars, etc.

(I) Lack of Oxygen. Sudden death from lack of oxygen due to too much nitrogen as in some gypsum mines or winds blowing from the deserts of Nubia and Arabia.

"The Deserts of Nubia and Arabia. — From the arid wastes of Arabia, intensely hot, dry winds blow in all directions over the coasts of Arabia, Nubia, Persia and Syria. These winds are known under the general name of simoom or samiel. Though, from their high temperature and absence of moisture, they often cause death from nervous exhaustion, yet they contain nothing really poisonous." Physical Geography. — Edwin J. Houston.

This same sickness has also occurred in France.

(J) Drowning. Lack of oxygen from drowning.

(K) Electric Deaths. Death from lightning, deaths from electric asphyxiation of all types and kinds. "Electricians have learned to broadcast over a neighborhood, such short wave lengths as to raise blood temperatures." These temperatures could be easily raised to terminate in death. Radio short wave therapeutic temperatures are now produced for therapeutic purposes in nearly every large hospital all over the world. Hospital short-wave radio vibrations to produce fever, have been picked up thousands of miles from the hospitals.

(L) Emotions. Shock disturbances due to emotions are of all types from indigestion to insanity and sudden deaths.

(M) Exhaustion. Sickness and sudden death from exhaustion are of all types and frequently encountered.

(N) Starvation. Sickness and death from food starvation, water starvation, and air starvation are of all types.

(O) Destructive Vibrations. Earth, atmosphere, life, vital complexities are composed of and constitute constructive vibrations, hence their greatest, most mysterious and fatal enemies are artificial, destructive vibrations.

ANCIENT PROVERB

We never miss the Water until the Well runs Dry. Atmosphere, Vital Complexities. The atmosphere's Vital Complexities capable of creating and sustaining life's vital complexities is a very delicately balanced vibrating physico-chemical, vital equilibrium. The people of the earth will not miss the loss of the atmosphere's vital complexities until they have either dropped dead or become permanently insane.

DESTRUCTIVE VIBRATIONS

In 1930, the atmosphere's vital complexities due to a 20 year automobile, aeroplane, dynamite-explosion and radio destructive vibration was one, lost; two, permanently perverted and three inflicted with destructive vibration malignancies. A destructive vibration process that has all life on the verge of extermination for ever.

DEMONSTRATION

The world-wide drought in 1930 and 1934, the

drought, gas, dust storms, earthquakes simultaneously occurring all over the world, 1935, the flood drought famine in China, exterminating people by the millions in 1936. The only way to demonstrate to the people of the earth how near they were to the end of all life for ever in 1936, due to destructive vibrations, is to immediately abolish destructive vibrations all over the world for a ten year armistice, to begin immediately and to be effective 1940-1950.

PROOF

The change in weather conditions and change in sickness following the abolishment of destructive vibrations all over the world for ten years will demonstrate to the people of the earth how near they have come to imitating Salmon.

The Salmon Lesson

Salmon, who have no one that possesses a knowledge of the physical and chemical origin of sickness to guide them, swim in large schools, to shallow ponds to spawn. The salmon soon exhaust the oxygen in the water and their dead bodies float on top. The people of the earth have but one physical and chemical physician to protect them from exterminating all vital complexities, in the most cruel and torturing manner possible through destructive vibrations.

DESTRUCTIVE VIBRATION SICKNESS

World War

The violent concussion destructive vibrations of aeroplanes, and dynamite explosions during the world war, produced permanent insanity, known as "shell shock," also neuroses and multiple permanent neuroses and neuroses of all types.

Blood Granulopenia or Neutropenia

A practically new disease due to a loss of the granular cells from the bone and marrow and blood often encountered following exposure to radiant energy as X-ray or Radio vibrations, clinically manifested with periodic recurrent fever and prostrations, with ulcerations of the mouth and throat, often called trench mouth. This discovery is suggestive that the trench mouth in the world war was due to a blood granulopenia due to the destructive vibrations from dynamite explosions and aeroplanes. Every soldier living today that took part in the world war is suffering from destructive vibration malignancies of one type or another, characterized by neuroses and multiple neuroses of all types. Destructive vibration malignancies from which they will never recover.

Civil

Nothing but a ten year world over destructive vibration armistice will demonstrate what destructive vibrations during the 20 year aeroplane, dynamite-explosion, radio destructive vibration era have done to life's vital complexities.

Fever

Electricians have learned to broadcast over a neighborhood such short wave lengths as to raise blood temperatures. A gigantic vital physico-chemical destructive monster that will raise blood temperatures with short wave lengths is too destructive a monster to allow to be broadcast at any wave lengths.

Sadest of all sad thoughts are these, it might have been.

Had the medical profession advanced by adopting the complex, physical and chemical origin of sickness as I announced in a paper entitled, "A Brief Resume of the Grosser Animal Nature, its Application to Medicine" also a paper entitled, "The Meteor-Telluric Physico-Biochemist of Coryza, Asthma and Influenza" likewise a paper entitled, "A Prophylactic Gas Filtering Ventilator for the Prevention of Air Sickness," or at least 33 1/3 % of all sickness, the people's paid health guardians, Boards of Health, Health Commissioners and general practitioners would have condemned destructive vibrations as "Life Greatest and Most Mysterious Nuisance" and ordered them abolished all over the world.

The ten year destructive vibration armistice will tell what this would have been worth to humanity.

DESTRUCTIVE VIBRATION SICKNESS

The effect of destructive vibrations on life's vital complexities during the 20 year destructive vibration era has been clinically manifested with:—

(A) A one to two hundred per cent. increase in permanent insanity. Such an alarming increase that it is now estimated that over half of the inmates in institutions for the care of the sick, are composed of mental defectives.

(B) A one hundred or more per cent. increase in sudden deaths; a percentage that is rapidly growing.

(C) An enormous increase in peptic ulcers, thyroidism, cancer, sugar diabetes, neuroses and multiple neuroses and neuritis of all types and varieties, reducing life to a veritable quiver on the verge of a permanent nervous breakdown.

(D) A new disease with coccygeal pelvic neuroses with excruciating and debilitating pain.

(E) A new disease of diaphragmatic pleural neuroses and multiple neuroses, holding the patient in a vise-like condition with excruciating pain.

(F) A new disease of continuous fever without any detectable pathological cause.

(G) A new disease of blood granulopenia malignancies due to a loss of the white blood granules, also bone marrow granules, characterized clinically with periodic fever and prostrations with mouth and laryngeal ulcerations, attacks occurring periodically until death with no known cure.

(H) A new disease Tachycardia, characterized by great acceleration of the pulse, heart going so fast that the victim becomes frightened, often turning back home if he has started out to work or theatre, with a fear of impending death.

(I) A new disease of paralysis, a peculiar type of paralysis, that gradually creeps over a person, generally past adult life, and in some cases, followed by death.

(J) A great increase in amnesia or loss of memory.

(K) A new disease of nervous, irritable haste, the afflicted feel as though they cannot wait to accomplish what they set out to do.

(L) A new disease of a great increase in narcolepsy or sleeping sickness.

(M) Poliomyelitis has increased to an alarming extent affecting adults as well as children. Horres:—Poliomyelitis was epidemic among horses in Wisconsin in the summer of 1935.

(N) Functional viscero-vascular crises have been greatly increased with symptoms resembling gall stones, appendicitis, ovarian abscesses or other abdominal complications.

(O) Anemia of all types has increased in frequency and severity.

MORTALITY

Mortality has been reduced during the 20 year destructive vibration era, reaching its lowest ebb during the destruction drought period, 1930-1934. Reduction

in mortality due to the absorption of groups of deleterious atmospheric gases with high humidity that periodically occur all over the world. Groups of gases that owing to their blood disintegrating chemical ingredients and blood exhausting physical characteristics as a high humidity or other unfavorable universal phenomena, disintegrate bloods, precipitating universal sickness, or at least 33 1/3 % of all sickness, constituting Life's Greatest and Most Mysterious Natural Enemy.

A gigantic life-taking enemy the detection, proof and description of which has required my entire forty years research, with my original methods of using my own unstable blood as a laboratory checked by two thousand, forty-five cooperative unstable blooded patients and controlled by about six thousand stable blood patients.

Complex Physico-Chemical Sickness. 33 1/3 % of all Sicknesses

DEFINITION. Complex, Physico-Chemical Sickness is precipitated by numerous periodic, seasonal and regional groups of deleterious atmospheric gases of poor respirability. Groups of gases, that owing to their blood disintegrating chemical ingredients and blood exhausting physical characteristics, disintegrate the blood sufficiently to be clinically manifested as air sickness or at least 33 1/3 % of all sickness. Groups of deleterious atmospheric gases due in part to nocturnal influences. Groups of deleterious atmospheric gases that occur nocturnally all over the world in different degrees.

NOCTURNAL

Nocturnal atmospheric gases exert a blood disintegrating tendency all over the world.

NOCTURNAL FEVER — The blood disintegrating action of nocturnal gases causes a rise of temperature in all human and warm blooded animals.

TYPHOID FEVER — The nocturnal rise in temperature is very marked and suggestive.

BIRTHS — More births occur during the night due to nocturnal blood disintegrating tendencies.

DEATHS — Most deaths occur during the night due to nocturnal blood disintegrating tendencies.

UNIVERSAL

The universal phenomena that tend to produce nocturnal blood disintegrations are:—

I. — Lack of sunshine.

II. — Negative sun gravity pull. The negative sun gravity pull causes the nocturnal tides. The night lack of sun gravity pull on the atmosphere causes a downward diffusion of nocturnal gases. The nocturnal downward diffusion of atmospheric gases is very evident especially upon cold, heavy dew nights in the rural districts. Thus the nocturnal odors from open toilets and barns is stifling and blood disintegrating. The day odors in rural districts are invigorating and blood stabilizing.

ASTHMA

Nocturnal blood disintegrating universal phenomena are the horror of the asthmatic. The nocturnal blood disintegrating influences are the cause of nocturnal attacks of asthma.

PRECIPITATION

Precipitation, snow or rain, causes the atmospheric gases to become blood disintegrating. Precipitation causes the atmospheric gases blood disintegrating for numerous reasons. Precipitation gives an excess of atmospheric nitrogen thus lowering the oxygen tension. Precipitation in the form of rain in the rural districts during the summer months, soaks into the pores of the ground and drives out of the ground all known varieties of blood disintegrating atmospheric gases, including the deadly swamp, methane varieties. Rain blood disintegrating atmospheric gases often precipitate attacks of asthma. Rain in 1935 carried to the earth the destructive vibrations, drought, soil, gas dust in the atmosphere.

Asthma Epidemic

The destructive vibration drought soil gas dust settling to the earth during heavy rains near Chicago, one of the first heavy rains, ending the four year destructive vibration drought period, brought down blood disintegrating gases precipitating epidemics of severe asthma.

Epidemic Sickness

Air sickness becomes epidemic wherever and whenever groups of deleterious atmospheric gases occur. Groups of atmospheric gases that owing to their blood disintegrating chemical ingredients and blood exhausting physical characteristics due to a high humidity and other unfavorable universal phenomena, disintegrate, first unstable blood, precipitating attacks of asthma.

SECOND

When these groups of blood disintegrating atmospheric gases occur with a day heat, relative humidity of seventy per cent. or more, the temperature above seventy-six, followed by chilly, heavy dew nights, a condition that characteristically occurs about August 20th and prevails until the first frost, these groups of blood disintegrating gases disintegrate unstable bloods, precipitating attacks of asthma and summer autumnal coryza (hay fever).

A Test

The asthmatic's unstable blood complex constitutes a delicately sensitive test for blood disintegrating gases and all complex, physical, physico-chemical and chemical blood disintegrating factors.

Summer Autumnal Coryza (hay fever) The summer autumnal coryza unstable blood complex requires a special group of blood disintegrating universal physico-chemical and chemical groups. The essential group of the summer autumnal coryza complex is one, a day Heat humidity retention and two, night chilly humidity.

No Epidemic

When the above conditions do not prevail, there is an absence of June coryza and summer autumnal coryza.

Example

Unusually cold, dry years, as occurred in Buffalo, August 1920. The temperature did not reach 86 and no day was there the usual August hemolytic combination, as (1) Heat retention temperature above 86 degrees, (2) Cloudy, (3) High heat humidity, (4) stale, windless atmospheric stasis; (5) Toxic ground gas accumulation and (6) Diminished atmospheric magnoelectricity, elasticity and absorption. The temperature was uniform and without any extreme variation between day and night temperatures, until August 23rd, when the cool nights began with a temperature of 43 degrees, an extremely cool night for August. This unusually low humidity and its very decidedly beneficial effect upon the health of the community, resulted in an absence of the usual epidemic of summer autumnal coryza. — Jack, New York Medical Journal for September 21, 1921.
