KICKTURM By Ace Manley Director, Blg Bromley Std School

The kickturn is a complete change of direction from a standstill. It is the fastest way for a skier to turn around in a stationary position.

If he is on a stope, the skier stands with skis horizontal to the slope. With skis parallel, both poles are placed in front of the skier at almost

One ski, in this case the downhill ski, is kicked forward and up in the air until the tail of the ski is set in the snow near the tip of the uphili ski. Without any hesitation, the downhill ski is pivoted downhill and swung around be-hind the skier to face the tail of the uphill ski.

Meanwhile, the downhill pole has been planted in the new uphili position.

As the uphill pole is then brought to a full arms' length on the downhill side, the original uphill ski, in one quick motion, is swung around nat and blaced in parallel position with th original downhill ski.

The skier should now be facing in the opposite direction from which he started the kickturn.

TIPS SKI

STRAIGHT DOWNHILL RUNNING POSITION

By Ace Menter Director, Big Bromley Ski School

Perhaps the best exercise for the beginner to develop good balance and coordination is the straight downhill running position.

Before starting this menewer, the skier should pick out a very gentle slope with a long run out at the bottom having no obstructions. This is especially important since this is probably the skier's first downhill running or free motion

At the start, the skis are flat on the snow and close together (about four inches apart). The kness and ankles are flexed forward, the weight equally distributed on both skis, and the body perpendicular to the slope.

many times before any further progress is at tempted. The balance and coordination achieved at this point will be of significance later.
