

Mr. and Mrs. G. M. Taylor Honored On 30th Wedding Anniversary

Mr. and Mrs. Gilbert M. Taylor of Addison, celebrated their 30th wedding anniversary by being guests of honor at a reception on Sunday, October 1, 1967. The reception was given by their son and daughter-in-law, Mr. and Mrs. Ronald G. Taylor at their home on Main Street in Andover.

For the occasion Mrs. Taylor chose a gold two-piece wool dress with dark brown accessories. She wore a corsage of Talisman roses a gift of her two grandsons, Gregory and John.

A wedding cake of tiers separated by pillars and topped with white bells centered the main table. It was surrounded by silver serving accessories. Mrs. Charlotte Greene, Miss Joan Whittam, and Miss Diane Catanday served cake, coffee and punch.

Guests from Andover, Wells, Keene, Addison and Ransomville presented Mr. and Mrs. Taylor with many lovely gifts.

Ruth Marie Dannheim and Gilbert M. Taylor were united in marriage on September 28, 1937 in Wells, New York. They are parents of three children, Mr. David Williams of Ransomville, Ronald Taylor of Andover and Gundy at home.

Father Dies

William J. Ringgen, 64, of 16 St. Yansville and father of Mrs. Joseph (Mae) Foster of Andover died Monday, October 2, 1967 in Lane Memorial Hospital following a brief illness.

A native of Wilkes-Barre, Pa., he was born May 2, 1895, son of Henry and Anna Elizabeth Ringgen and has resided in Wellsville for approximately 40 years. He was a retired building contractor and a member of Immaculate Conception Church.

Surviving are a son Harold of Andover, a daughter, Mrs. Joseph (Mae) Foster of Andover and a brother Francis Ringgen, Plymouth, Pa. He was preceded in death by his wife, the former Mary Flouing.

A prayer service will be held at the Embury Funeral Home, Wellsville at 9 a. m. Thursday, followed by a Requiem Mass at 9:30 a. m. at Immaculate Conception Church with the Very Rev. Norman J. O'Meara as Celebrant.

Burial was in Sacred Heart Cemetery.

Check Your Registration Renewal Date

Registration renewal punch card applications will be mailed to all motor vehicle owners whose present registrations expire on October 31, the Department of Motor Vehicles says. The cards will be sent out during the last two weeks in September. When completed and sent back to the nearest motor vehicle issuing office with the renewal stub from the present registration certificate and the proper fee, it will be returned by mail with a new sticker to be placed on the rear of the present plate.

Card of Thanks

We wish to thank all those who for taking care of the food that was brought in and the many cards we received during the loss of our dear mother.

Cornell Scientist Conducts Research On Aquatic Plants

Several kinds of common water plants that pose a growing menace to life in many lakes and ponds are under investigation at Cornell University.

Objective of the study is to determine what makes these plants grow in abundance and to find ways to curb the increasing underwater plague.

"If these plants are left unchecked, many lakes and ponds would eventually be choked to death," warned Prof. Hugh F. Mulligan, N. Y. State College of Agriculture, Cornell.

The Office of Water Resources Research, U.S. Department of Interior, is supporting the three-year study with a \$75,000 grant. Cornell is matching the federal grant to meet costs of the \$150,000 project, the largest of this type ever to be undertaken in the country.

Mulligan is using 20 of Cornell's 100 man-made research ponds, which enable scientists to duplicate natural environmental conditions.

Water milfoil (known to scientists as Myriophyllum exalbicans), curly-leaved pond weed, elodea, and coontail are under investigation. Microscopic algae associated with these plants also are being studied.

Water milfoil has a world wide distribution and many lakes in Northeast United States are clogged with this species, according to Mulligan.

"Excessive growth of any one water plant species could lead to elimination of good fish, often upsetting environmental conditions," Mulligan said. "As a result, less desirable fish thrive, among other problems."

The Cornell scientist believes that the amount of nutrients such as nitrogen and phosphorous available in the water is the key to the abundance of water plant life. The response of plants to different amounts of these nutrients will be studied.

In addition to nutrients that are already present in the water, sewage and industrial wastes are becoming the major source of enrichment, he pointed out.

HEALTH FOR ALL

This column is sponsored, in the interest of better health, by the Allegany Health & Tuberculosis Association, 44 Schuyler St., Belmont, N. Y.

IT MEANS SAVING LIVES

"Chemoprophylaxis" may look like a big, fancy word; but it adds up to a very simple idea. It means preventing disease through the use of drugs, instead of waiting for the disease to happen.

While this medical procedure has been known for some time, it is just now coming into wide use against a particularly stubborn contagious disease — tuberculosis. Only within the last few years have doctors discovered that the drugs effective in curing TB — notably isoniazid — also have great possibilities in preventing its development.

The possibilities apply both to persons whose bodies the germ has invaded but who haven't yet become ill with the disease, and to those who have had active TB in the past and are at risk of suffering a

relapse.

Extensive trials involving large numbers of people have shown good results. And now a group representing most of America's leading medical opinion in the field of chest diseases has formally announced its approval of TB prophylaxis. The group, which includes experts associated with the American Thoracic Society, the National Tuberculosis Association and the U. S. Public Health Service, recommends chemoprophylaxis as a prime method for reducing TB in the United States. It estimates that "extensive use of chemoprophylaxis now would likely reduce by 300,000 the total number of cases in the United States in the next 15 years."

The elimination of nearly a third of a million TB cases will constitute a huge step toward the anti-TB movement's ultimate goal — complete eradication of the disease for American life. TB chemoprophylaxis, if it achieves anything like the success forecast for it, will prove a major development in medical history.
