Is automation good? People throughout the world are asking this question more and more. Is such a good thing to let machines take over our lives? True, men built them, but the fact remains that they have replaced man in so many areas.

Computers have been designed to think for us. The advantages of these are innumerable - they can do calculations that formerly took countless hours in just a few seconds. They've enabled man to travel in space - the Apollo 9 which is in orbit right now is there because of computers. Yet, are all these things truly worth the loss of our ability to work, both mentally and physically? It would seem not.

Our country is becoming more mechanized every day. The 20 - 30 hour work week is not far in the future. Automation may prove advantageous now, but I fear it will be our downfall in the years ahead.

You get a little over \$4.00 for every \$3.00 you invest.

And that's nothing to sneeze at.

Some people have misconceptions about Savings Bonds.

They think they're a nice, safe investment but they don't really give much in the way of returns.

Look at it this way. U.S. Savings Bonds now pay 4 1/2% interest when held to maturity - a little over \$4.00 back for every \$3.00 you invest, in just seven years.

On top of that, the interest is exempt from state or local income tax, and Federal tax may be deferred until

you cash the Bonds. That isn't much a real difference in what you actually get back on your investment.

Also, buying Series B Bonds lets you purchase higher interest Freedom Shares in combination - and they pay a full 5% when held to maturity of four and one-half years.

Any way you look at it, Savings Bonds are a good investment.

And you know something?

They always will be.
